

Call to action:

# Measure holistically data centre carbon footprints!!!

...... followed by data centre decarbonisation actions in the 21<sup>st</sup> century open source collaborative commons and its circular economy

John Laban Oct 2021 john.laban@opencompute.org +447710124487 @rumperedis

- What are your data centre carbon footprints and Scope 2 & Scope 3 relationships
- We are all just slaves to the economists models & 21<sup>st</sup> century embedded economy
- Killing the myth that being green costs more money
- Open Source ICT hardware is well rotted horse shit for growing the Circular Economy
- Yes! open source software eats data centre hardware by 90%

Q&A

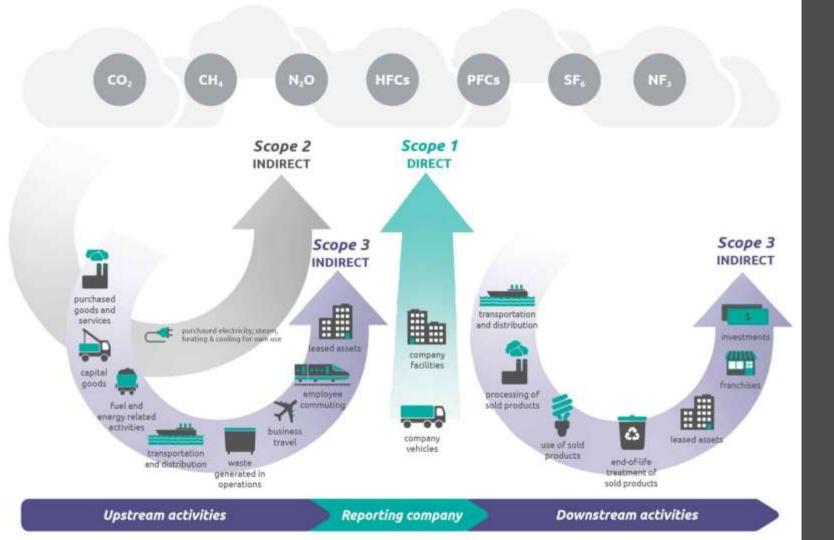

# Data Centre CO2 emissions

"If you don't measure them, you can't improve them."

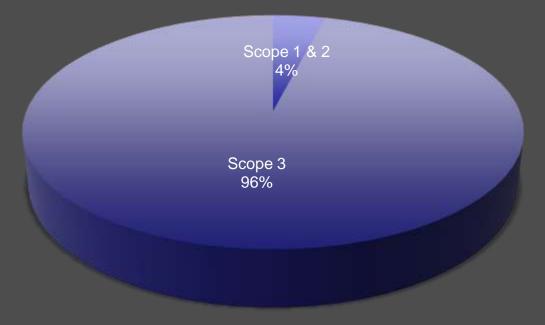

Now I could be wrong ...what do you think?

#### Green House Gas Protocol

Available Since 2001

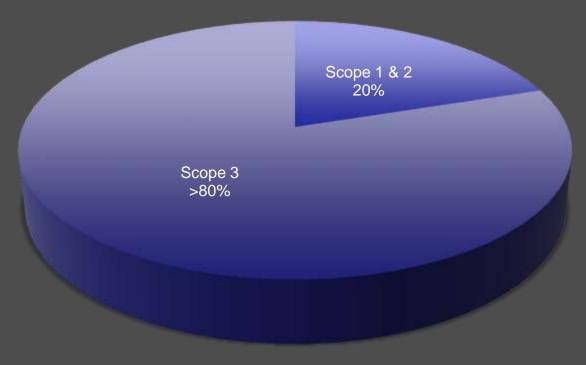

# City of London Corporation CO2 Emissions

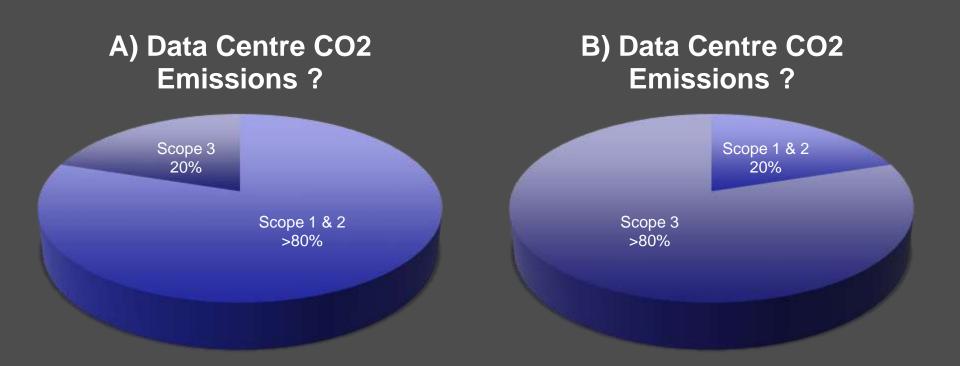

https://www.cityoflondon.gov.uk/assets/Services-Environment/climate-action-strategy-2020-2027.pdf

# **All Sectors**

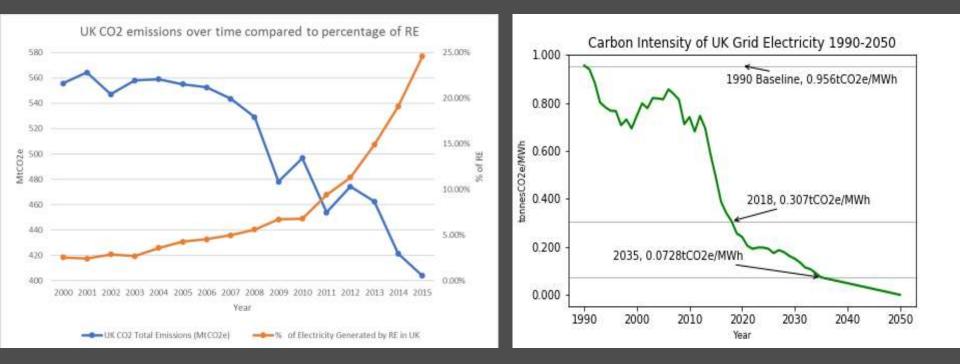

https://www.youtube.com/watch?v=q8VMsHKcywg&t=

Which pie chart is nearer to reality for a data centre in Europe?

#### Data Centres - as Scope 2 approaches ZERO Scope 3 approaches 100%

Data Centres it's more than just energy efficiency and PUE!

#### Wooden Data Centre Facility Sweden

#### How would this impact Scope 3?

#### Ask Lars Schedin for the answer

PS: Lars is not a Data Centre Expert

So my call to action for the data centre industry

Start measuring holistic CO2 emissions

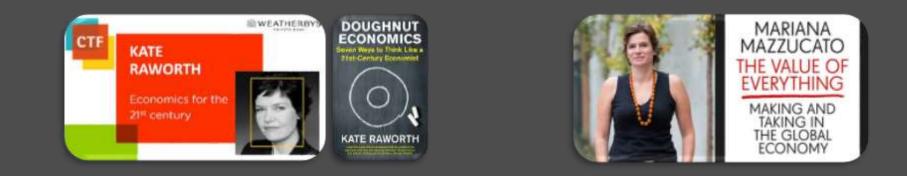

and don't forget Scope 3

"Practical men who believe themselves to be quite exempt from any intellectual influence, are usually the slaves of some defunct economist."

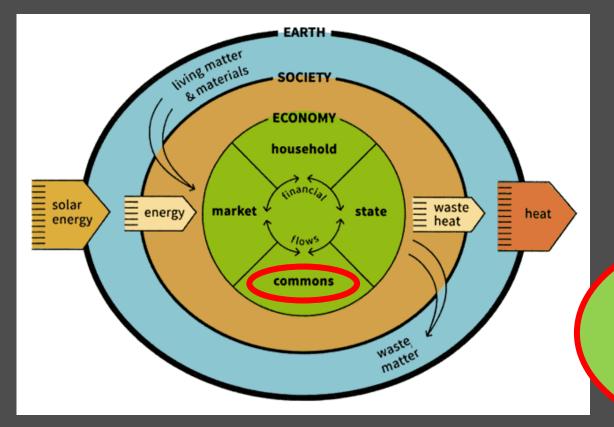

John Maynard Keynes

### Gender economics in the 21<sup>st</sup> century

### 21<sup>st</sup> century embedded economy model

#### Commons

Open source technology collaborative commons

# **Green Deal is** Europe's Man on the Moon Moment

EU border Tax Scope 3 CO2

#### EU Public Money & open source technology policies

European Commission > Strategy > Shaping Europe's digital future > Funding opportunities >

Shaping Europe's digital future

CALL FOR TENDERS | 4 July 2019 to 9 September 2019

Call for tenders: Study on the impact of Open Source Software and Hardware on technological independence, competitiveness and innovation in the EU economy

The European Commission is launching a study which shall investigate in detail the economic impact of open source software (OSS) and open source hardware (OSH) on the European economy. The study should identify strengths, weaknesses, opportunities and challenges of open source in relevant ICT policies.

Marketplace > Circular Economy

# **Circular Economy**

The Circular Economy is an economic approach to sustainability which minimizes waste and makes the most of IT assets. This approach focuses on developing products so they can be reused and repurposed with no residual waste.

As the amount of hardware used in data centers continues to grow, OCP is committed to looking at ways to help reduce waste and embodied energy across all areas of the data center infrastructure.

OCP members have led this effort by creating integrated software solutions based on 2nd user OCP hardware, which enables enterprise companies and public sector organizations to quickly evaluate, adopt and scale their infrastructure using proven hardware.

All integrated solutions on this page are based on a Circular Economy approach and supported by our OCP Members.

#### Myopic Culture in Data Centre Supply Channel?

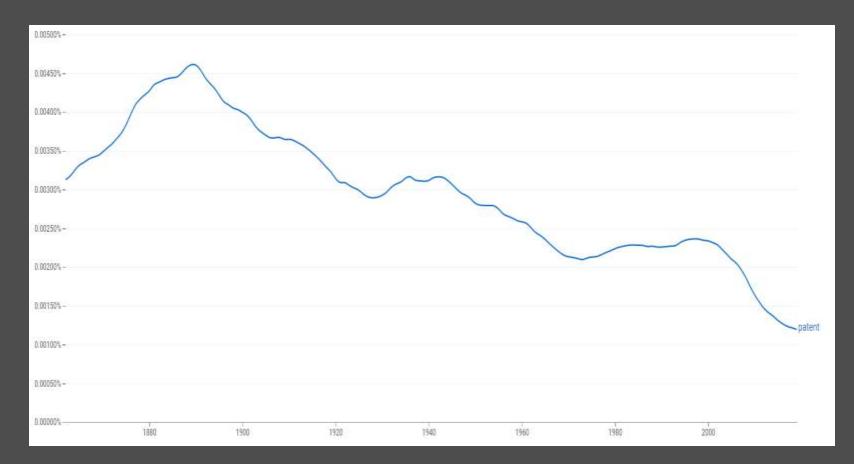

"The Myopic cultures, Levitt postulated, would pave the way for a business to fall, due to the short-sighted mindset and illusion that a firm is in a so-called 'growth industry'.

This belief leads to complacency and a loss of sight of what customers want.

It is said that these people focus more on the original product and refuse to adapt directly to the needs and wants of the consumer."
