winner of the “business creation” in Monaco 2007

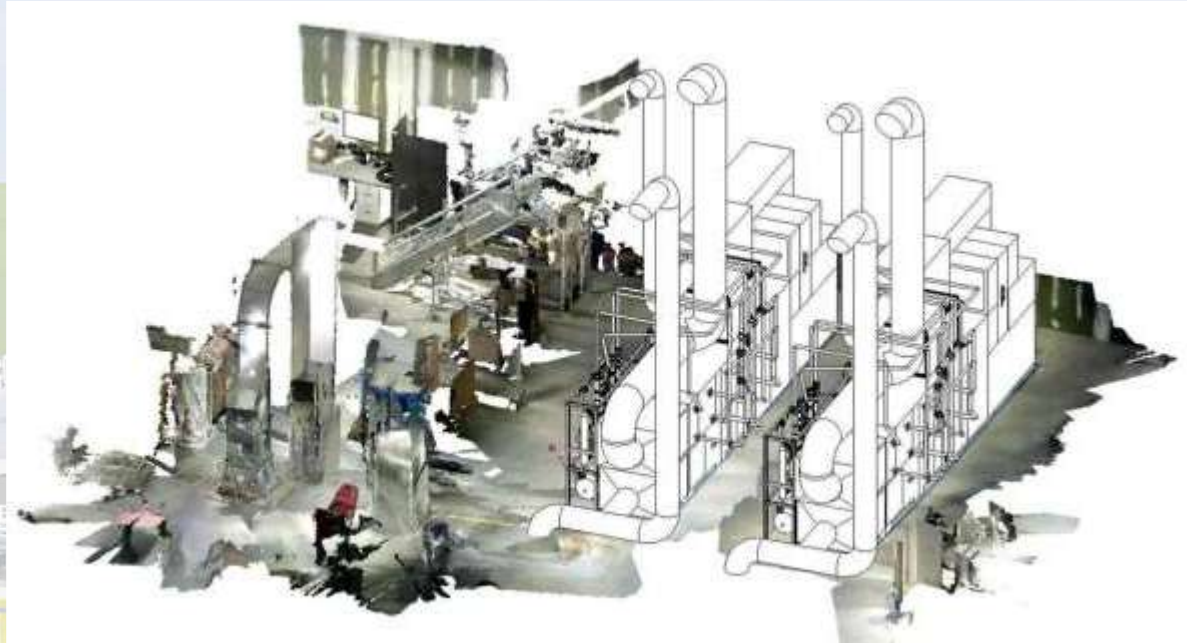

## Engineering

- 3D drawings
- Simulation CFD
- Prototyping
- 3D printing

## HVAC system

- Turnkey solution
- Manufacturing
- Prefabrication
- Installation on site

# HVAC : from engineering to commissioning

ENOLEO

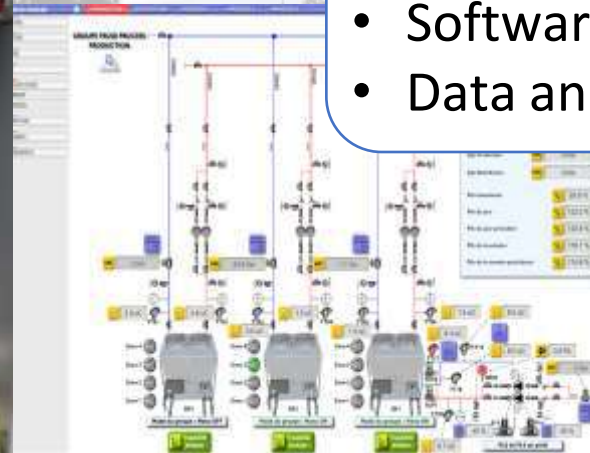

## Automation

- Functional analysis
- Electrical drawings
- Programming
- Interoperability
- Commissioning

## Software

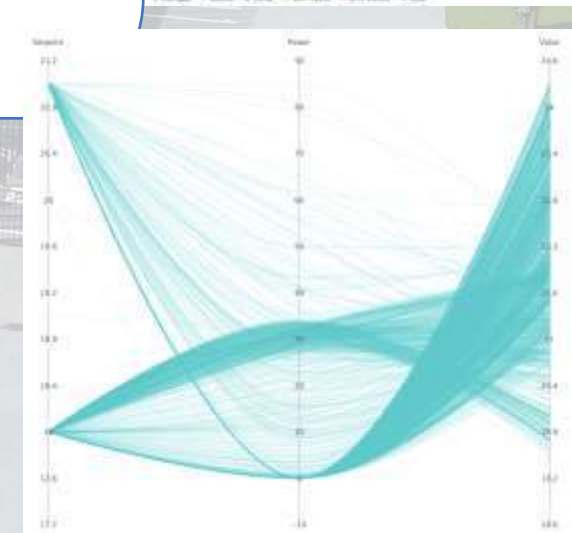

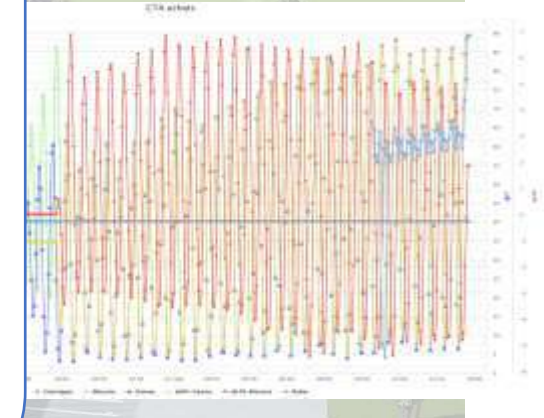

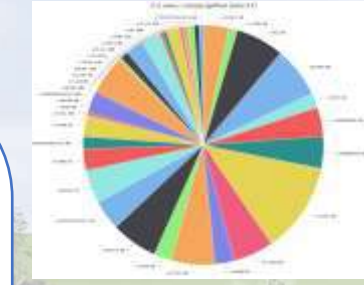

- BMS
- Software dev
- Data analysis

## Kaizis : predictive maintenance & continuous improvement

- Systemic view, allows for more in-depth analysis of performance indicators.
- This saves precious time, allows operators to better understand and process data, and to be proactive in avoiding malfunctions that could have serious impacts.
- Easy identification of changes to be made to the system to make it more efficient.

# INNOVATE WITH MONACO

## The agroindustry, a driver of sustainable development

**Frédéric Dalmasie** CEO of Agricorp S.A.M.

Frédéric Dalmasie has extensive experience in finance, advisory and management accumulated in HSBC, Deloitte and Del Monte. His group is now focusing on the development of sustainable agricultural value chains, with an emphasis on local production and transformation, implementation of agricultural practices respectful to the environment and creation of positive socio-economic impact.

# OUR OPERATIONS

## AGRICULTURE

- ✓ We cultivate **staple crops** for **emerging markets**
- ✓ We work with local communities to:
  - ✓ promote the **use of Good Agricultural Practices**
  - ✓ facilitate the **access to quality agricultural inputs**
  - ✓ secure the **access to market for individual producers**
- ✓ We invest in local **processing, storage** and **logistics capabilities**
- ✓ **Land under management:**

**80k +**

Ha of concessions  
for agriculture

**50k +**

Ha of concession  
for agro-forestry activities

**Locations:** Benin, Ghana, Republic of Guinea, Republic of Congo

**Products:** Cereals, Roots and tubers, Protein Crops, Nuts & Seeds, Vegetable Crops, Specialty Crops

# OUR OPERATIONS PROCESSING

- ✓ We add value to our products by **processing raw materials**, with focus on safety, quality and **efficiency**
- ✓ We manage **two canning factories based in Eastern Europe**, with combined capacity of 10 million units per year
- ✓ The support of European Union Programme for Investments in processing & marketing of agricultural products has enabled us to scale up our operations

**Locations:** Bulgaria, Republic of North Macedonia  
**Products:** Canned vegetables, Vegetable-based food

# OUR OPERATIONS

## VANILLA & SPICES

- ✓ We produce and supply **vanilla, spices** and other **high-value niche products**
- ✓ We export to international **customers from the food and cosmetics industries** in **Europe, Asia, North America**
- ✓ We take pride in **managing our fields and processing facilities in a sustainable manner**
- ✓ In order to guarantee **traceability, quality and fair remuneration for farmers**, we work closely with the association "**Inside Madagascar**" and the APVAM which currently brings together more than 900 producers

**Locations:** *Madagascar, Mauritius, Comoros*  
**Products:** *Vanilla, Spices, Essential Oils*

# OUR MISSION

“

*Our mission to bring consumers closer to producers, creating more value and opportunities for our local partners and securing better quality products, while minimising our footprint on the environment.* ”

# ENABLING SUSTAINABLE PLACES

ELIGIBLE PROJECTS CATEGORY:  
**PROJECTS FOR ENVIRONMENTALLY  
SUSTAINABLE MANAGEMENT OF LIVING  
NATURAL RESOURCES AND LAND USE**

- Sustainable Agriculture
- Land restoration, agroforestry & biodiversity

ELIGIBLE PROJECTS CATEGORY:  
**PROJECTS FOR SOCIOECONOMIC  
ADVANCEMENT AND  
EMPOWERMENT**

- Creating employment opportunities
- Training on sustainable practices
- Support to local economic development of communities

# INNOVATE WITH MONACO

How AI is being used to make buildings smarter and greener in over 70 cities worldwide

**Sam Ramadori**  
CEO of Brainbox AI

# INNOVATE WITH MONACO

How digital twin technologies are being used as a tool to develop urban-scale decarbonisation roadmaps

**Valeria Ferrando**

Associate Director – ICL at IES Ltd

# Digital Twins to decarbonise cities and communities

Dr. Valeria Ferrando  
Associate Director, ICL Consultancy

# The Vision

*IES believe that every building of every city in the world can be decarbonized. Our purpose is developing the technology to make that happen. Our ultimate aim is to create a built environment that is resource and energy efficient. Eliminating global reliance on fossil fuels while promoting comfort, health and wellbeing, and fairer access to energy for every citizen in the world.*

# About IES

Home to the **largest building physics analytics team** in the world

**28**

Years of building  
analysis

**Apache**

World renowned  
simulation engine

**75,000+**

Projects per year

**>1,000,000**

Buildings

**37**

Power stations  
prevented

# From buildings to cities: Making Good Decisions

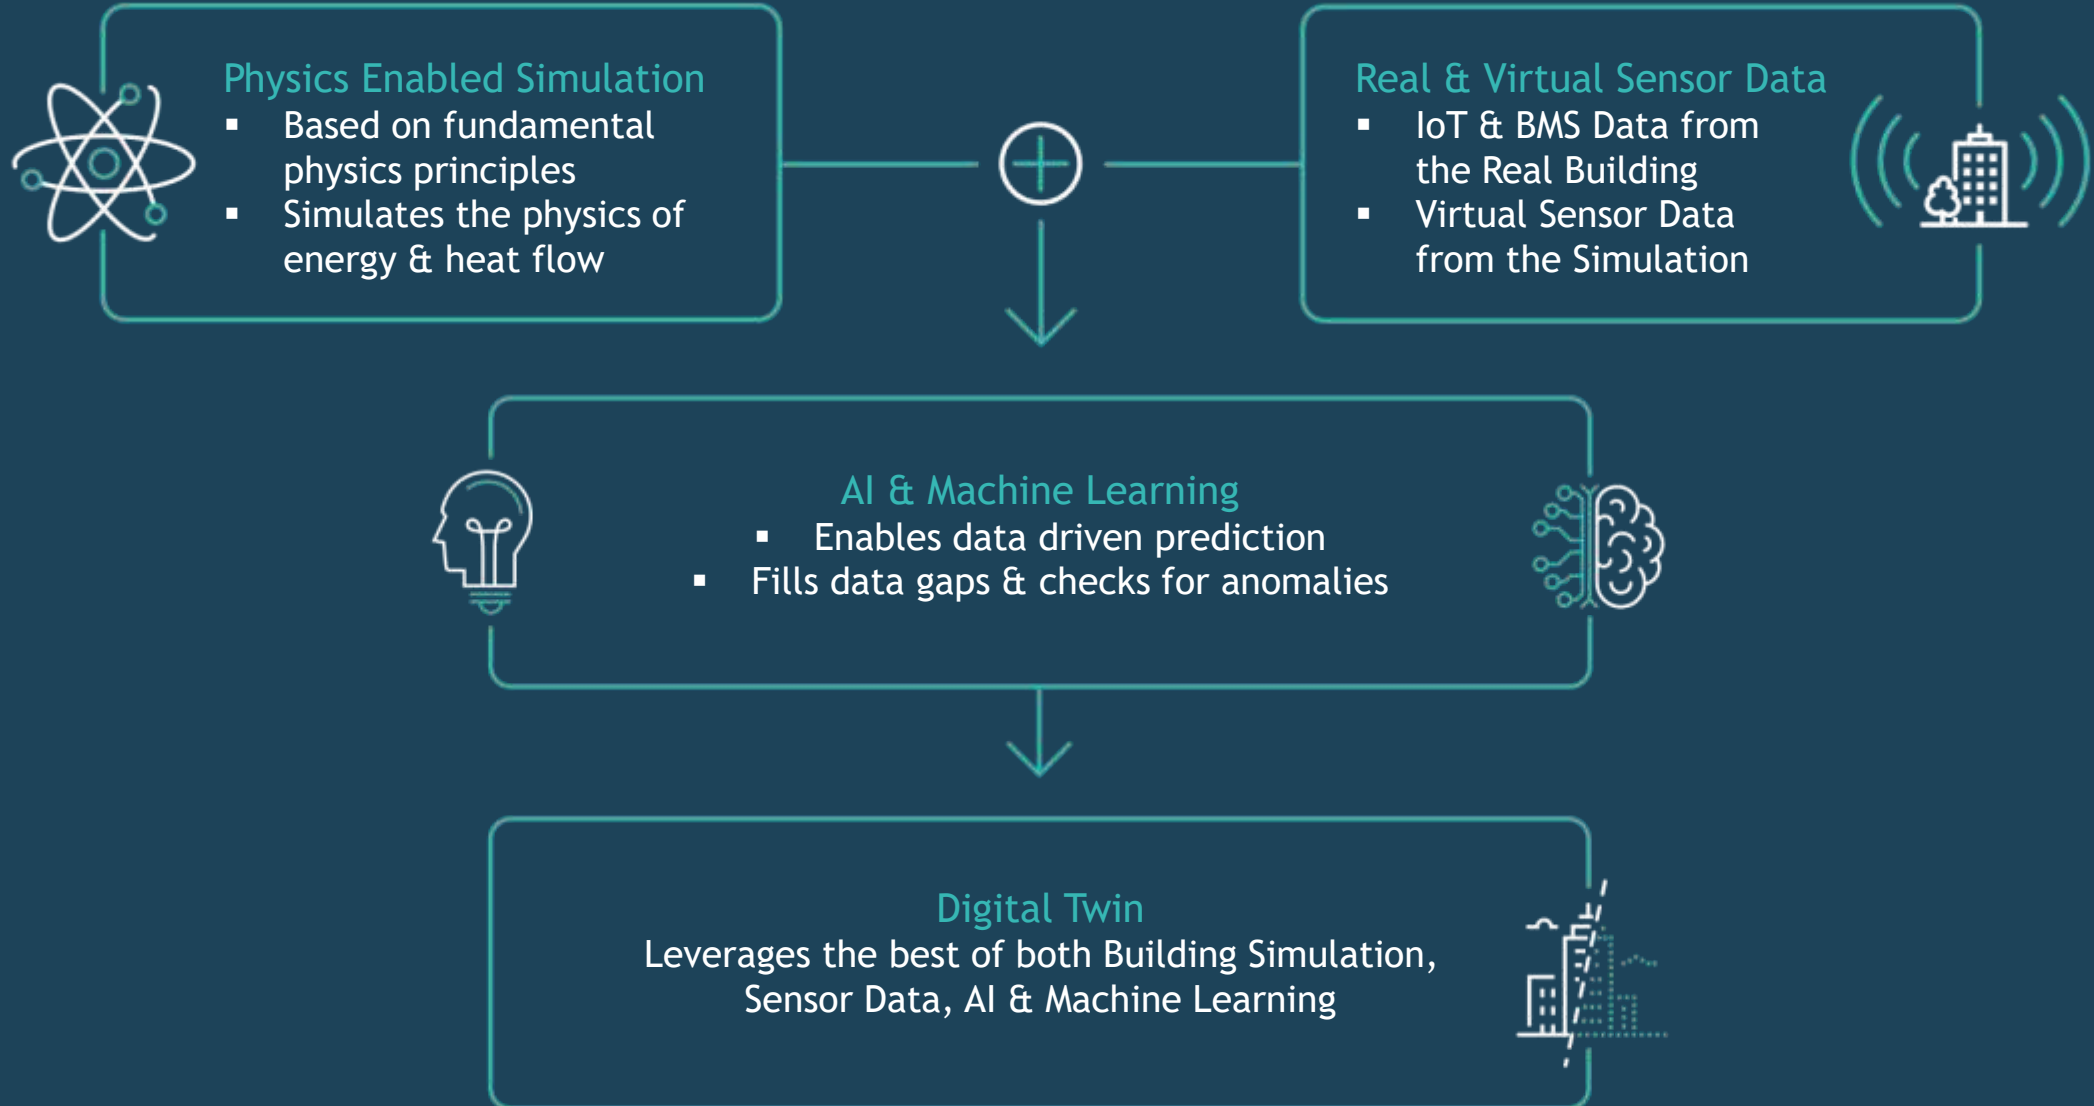

- Decarbonisation is a too big challenge to be tackled building by building
- Need to look at communities and how buildings interact and exchange resources
- Identify opportunities for large scale retrofits
- Enabling renewable integration to increase production from clean sources- match supply and demand
- De-risking investments

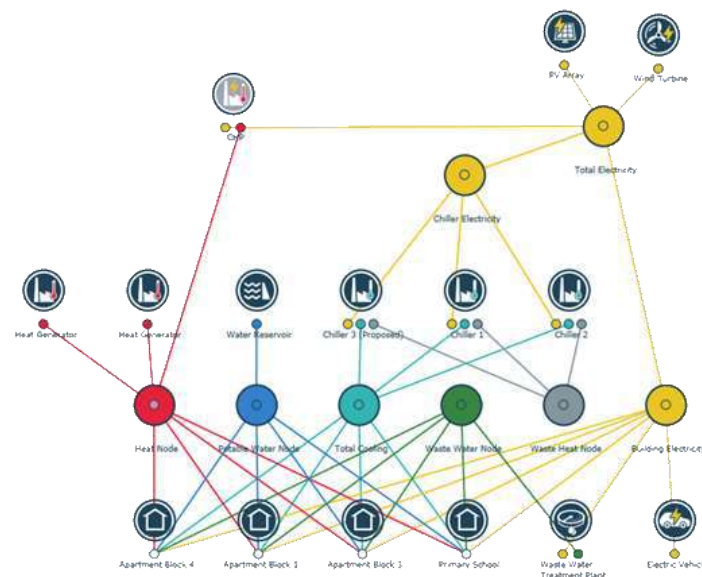

The background is a grayscale aerial photograph of a city, showing a dense grid of buildings and streets. A semi-transparent teal rectangle is overlaid on the image, centered horizontally and vertically. Inside this teal rectangle is a white rectangular area containing the text. The text is in a large, bold, white sans-serif font, arranged in two lines. The overall composition is clean and modern, suggesting a digital or technological theme.

# IES Concept of a Digital Twin

# The Best of Physics, Data and AI/ML

# What do Digital Twins look like?

# Digital Twins for large scale Net-Zero Road Mapping

- De-risk capital investments virtually comparing different scenarios
- Communicate your net-zero plan using visually engaging 3D models
- Decarbonisation of your heating and cooling needs
- Reduce reliance on the grid and improve energy resilience
- Improve renewable energy generation and storage
- Reduce energy costs by sharing heating, cooling and power
- Integrate Electric Vehicle (EV) charging and demand optimisation
- Understand the complex interactions between buildings and energy networks

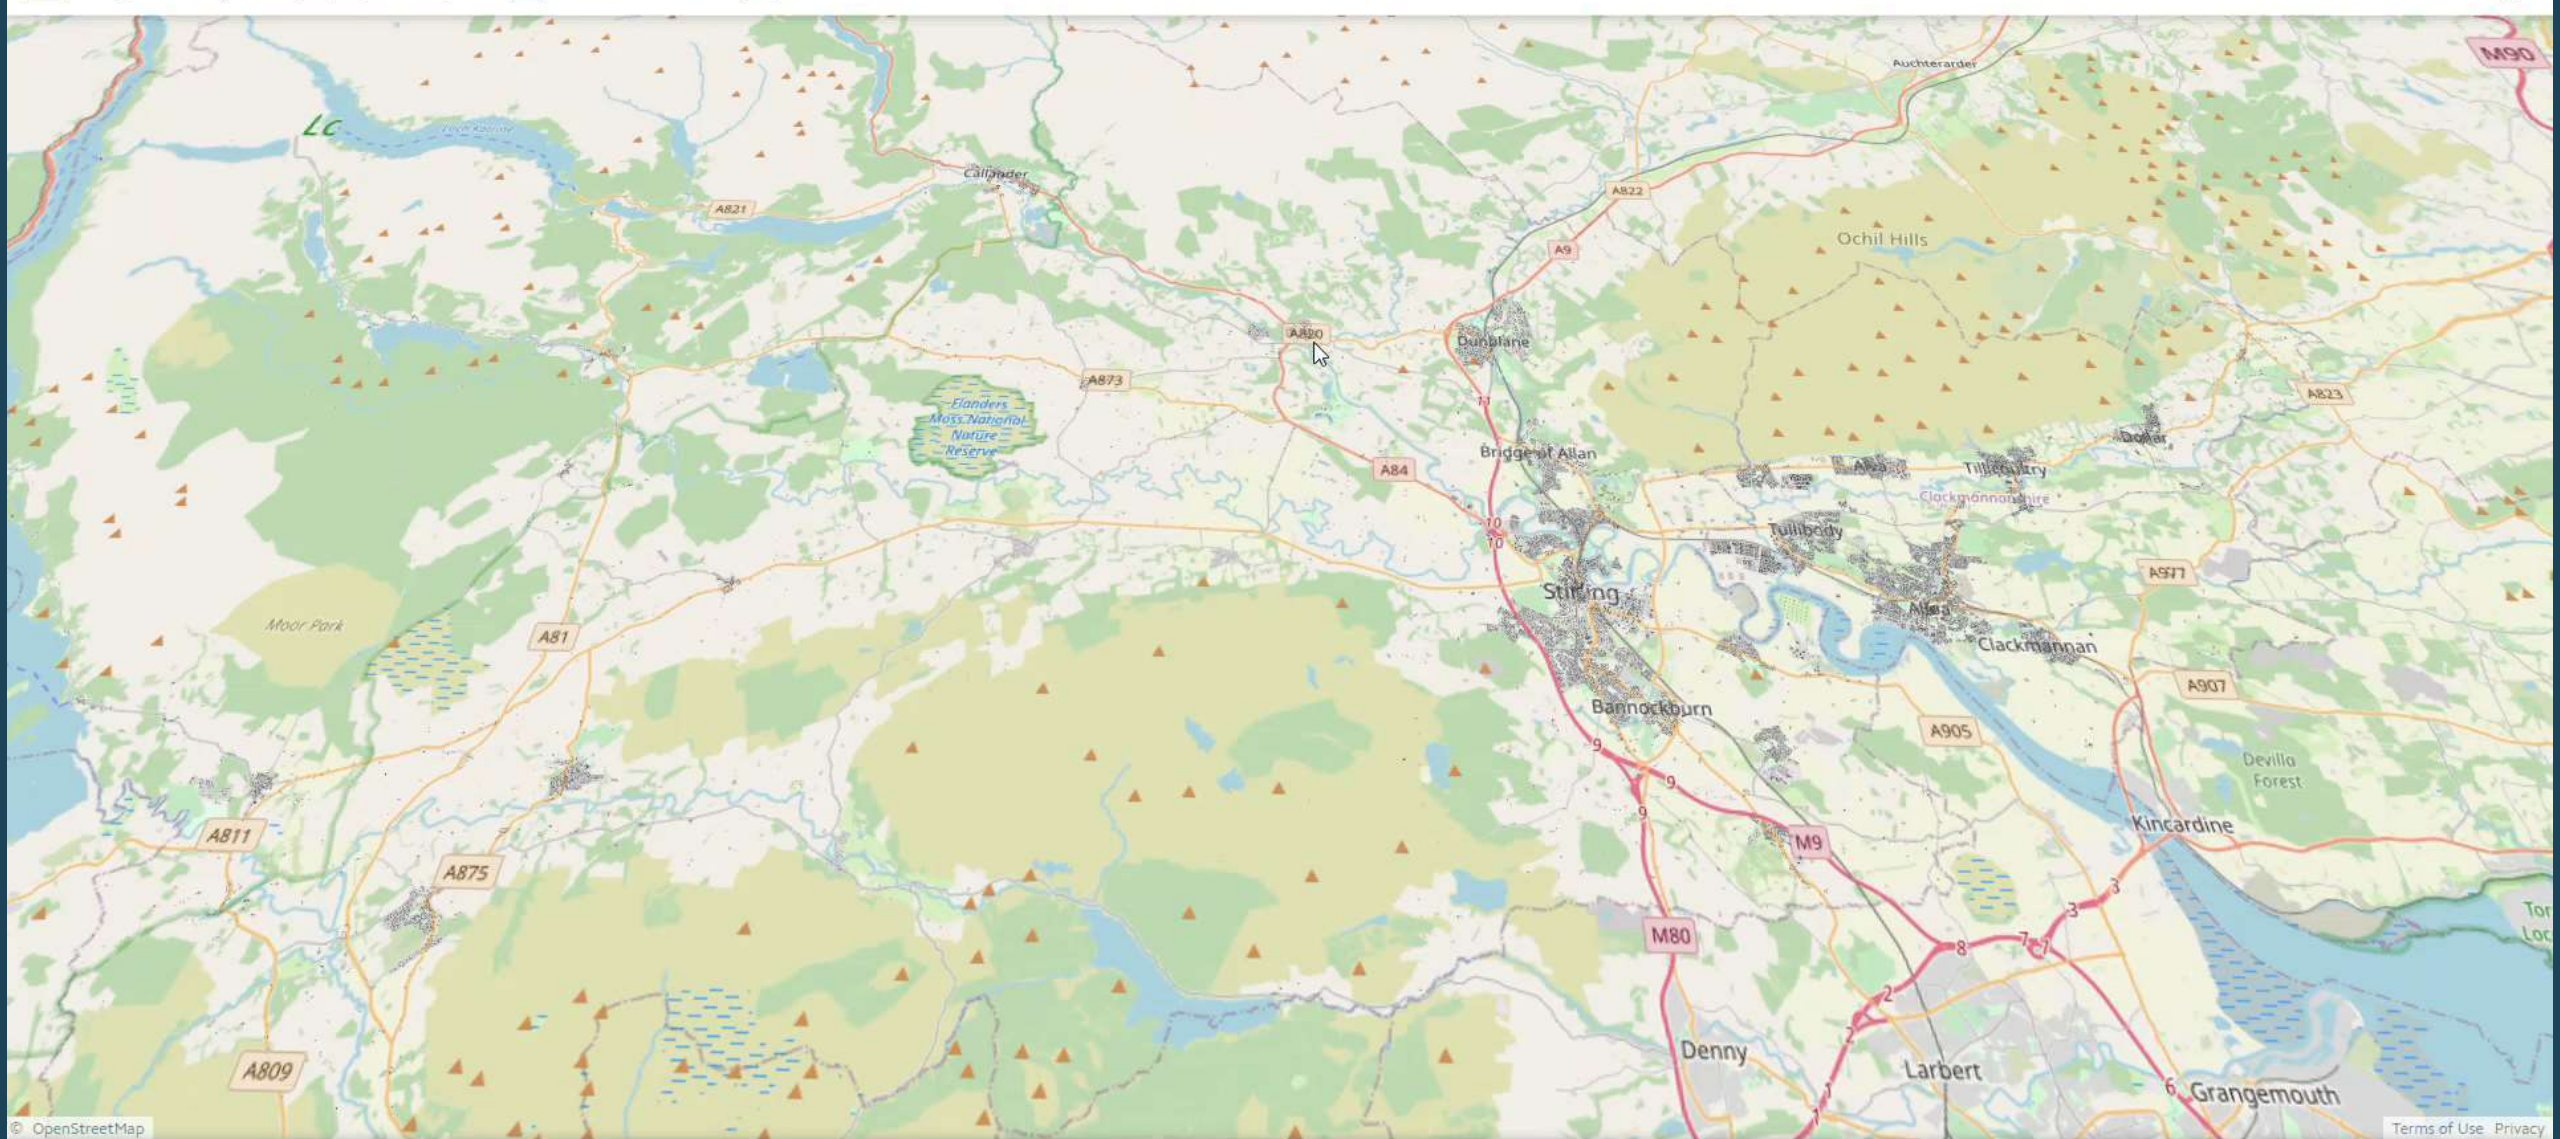

# Cities we've been working with

**Example:  
Regional DT to test  
decarb options**

# Example: Decarbonising Warrington Borough

# The Locality: The Warrington Borough

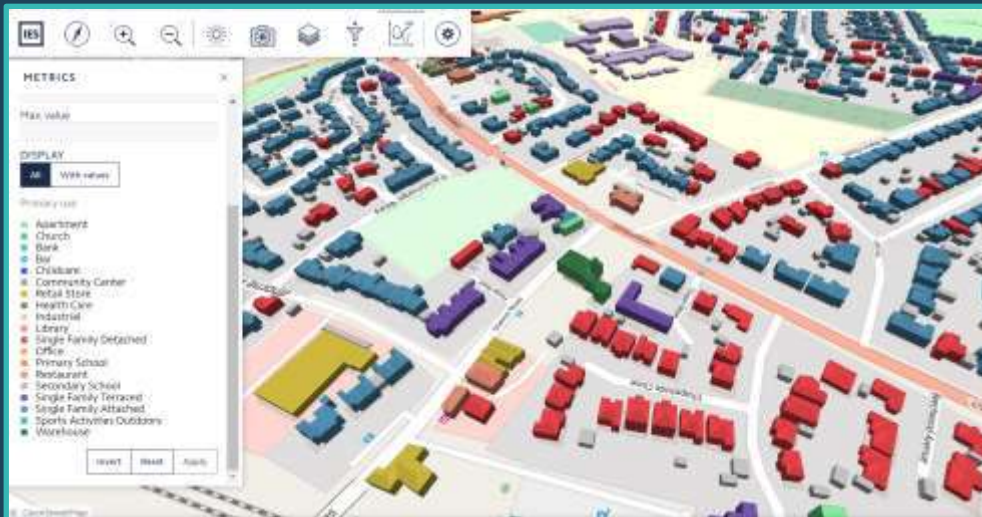

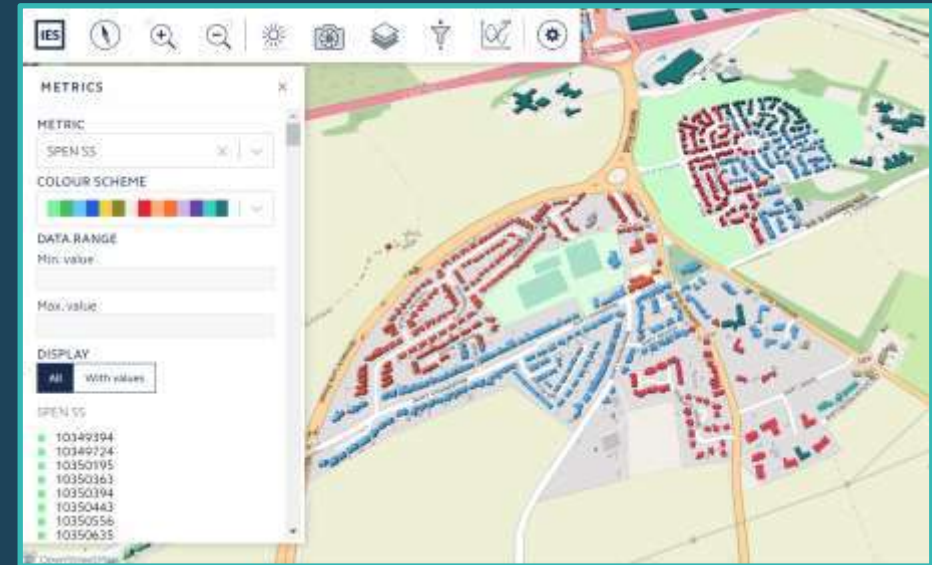

- North West England
- Total Area: 182km<sup>2</sup>
- Total Population: 210 000 inhabitants
- Approx. 90 000 Built structures

# Digital Twin: Collected Data

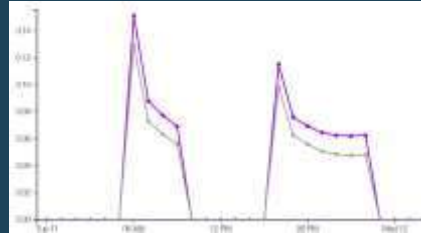

Example:

- Building use (bottom left)
- Electrical Network (top right)
- Roof insulation (bottom right)

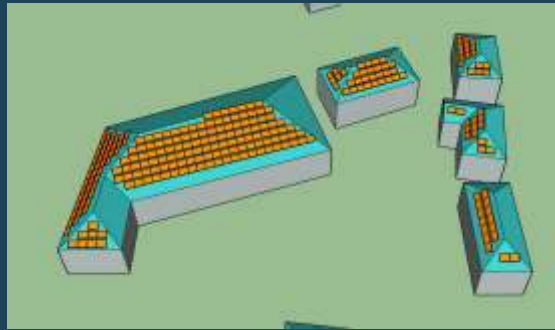

# Scenario approach: Strategies

**1. Energy demand & Retrofit:** Baseline and retrofit scenario energy demand?

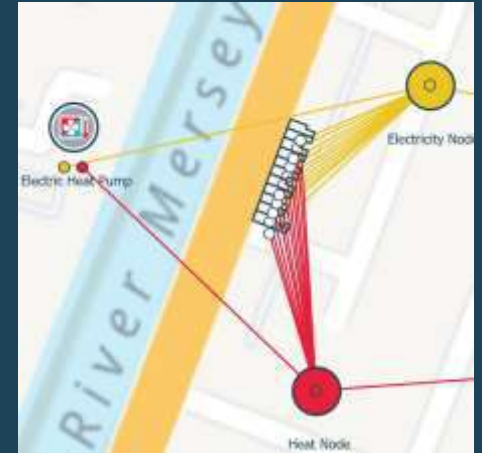

Targetting homes with:	Number of Homes retrofitted	% of homes retrofitted	Total Gas Before(kWh)	Total Gas after (kWh)	Gas reduction (kWh)	% difference
Uninsulated Cavity Walls	890	20.88	71082986.77	66767603.67	4315383.106	6.07
Solid Wall	1056	24.77	71082986.77	61199592.8	9883393.975	13.90
Single Glazing	52	1.22	71082986.77	69881890.37	1201096.405	1.69
Single Glazing + before 2002	2800	65.68	71082986.77	63009422.03	8073564.747	11.36
No Roof Insulation	555	13.02	71082986.77	63972596.88	7110389.894	10.00
Roof Insulation <150mm	2759	64.72	71082986.77	62114090.99	8968895.778	12.62

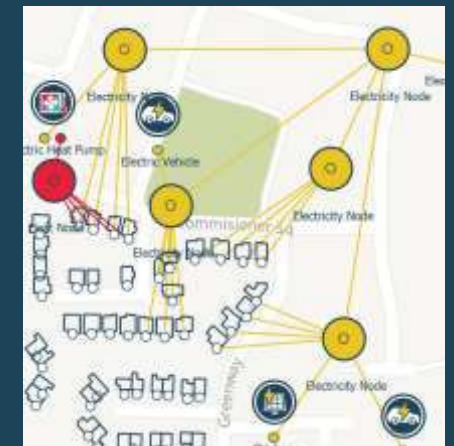

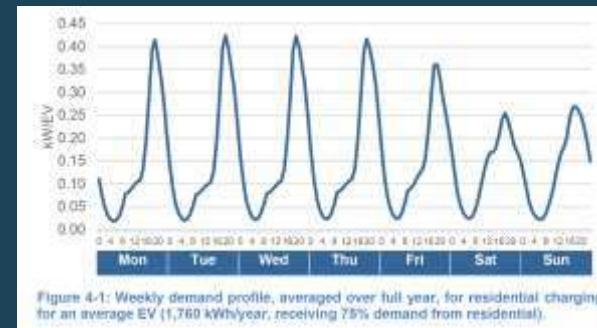

**3. DER & Storage:** What is the max PV deployment ?  
Its decarbonisation potential? Necessary storage?  
Impact on grid ?

**2. Heat demand decarbonisation:** Which technology can help decarbonise the heat demand?  
Performance? Availability ?  
Impact on grid?

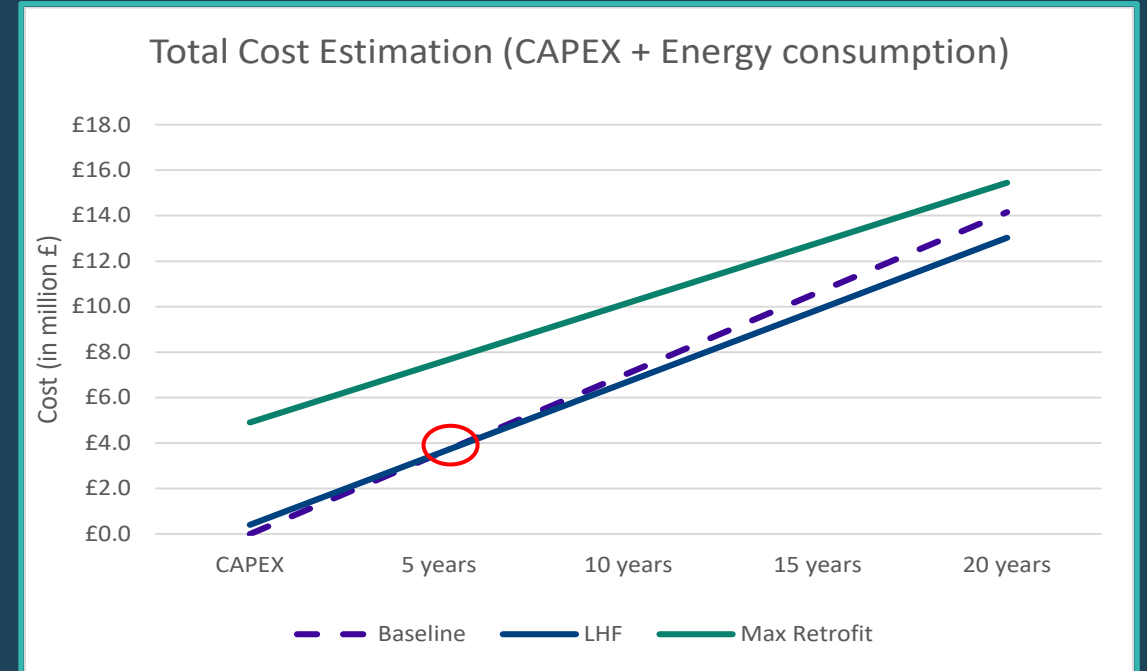

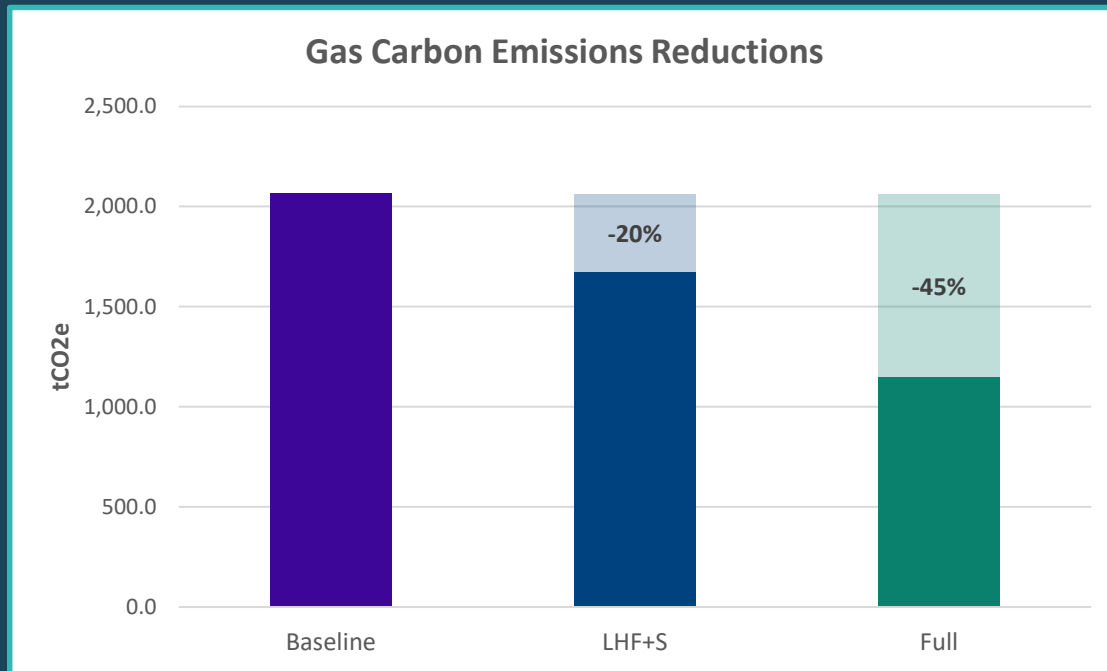

**4. EV chargers:** Max EV deployment ?  
Impact on grid ?

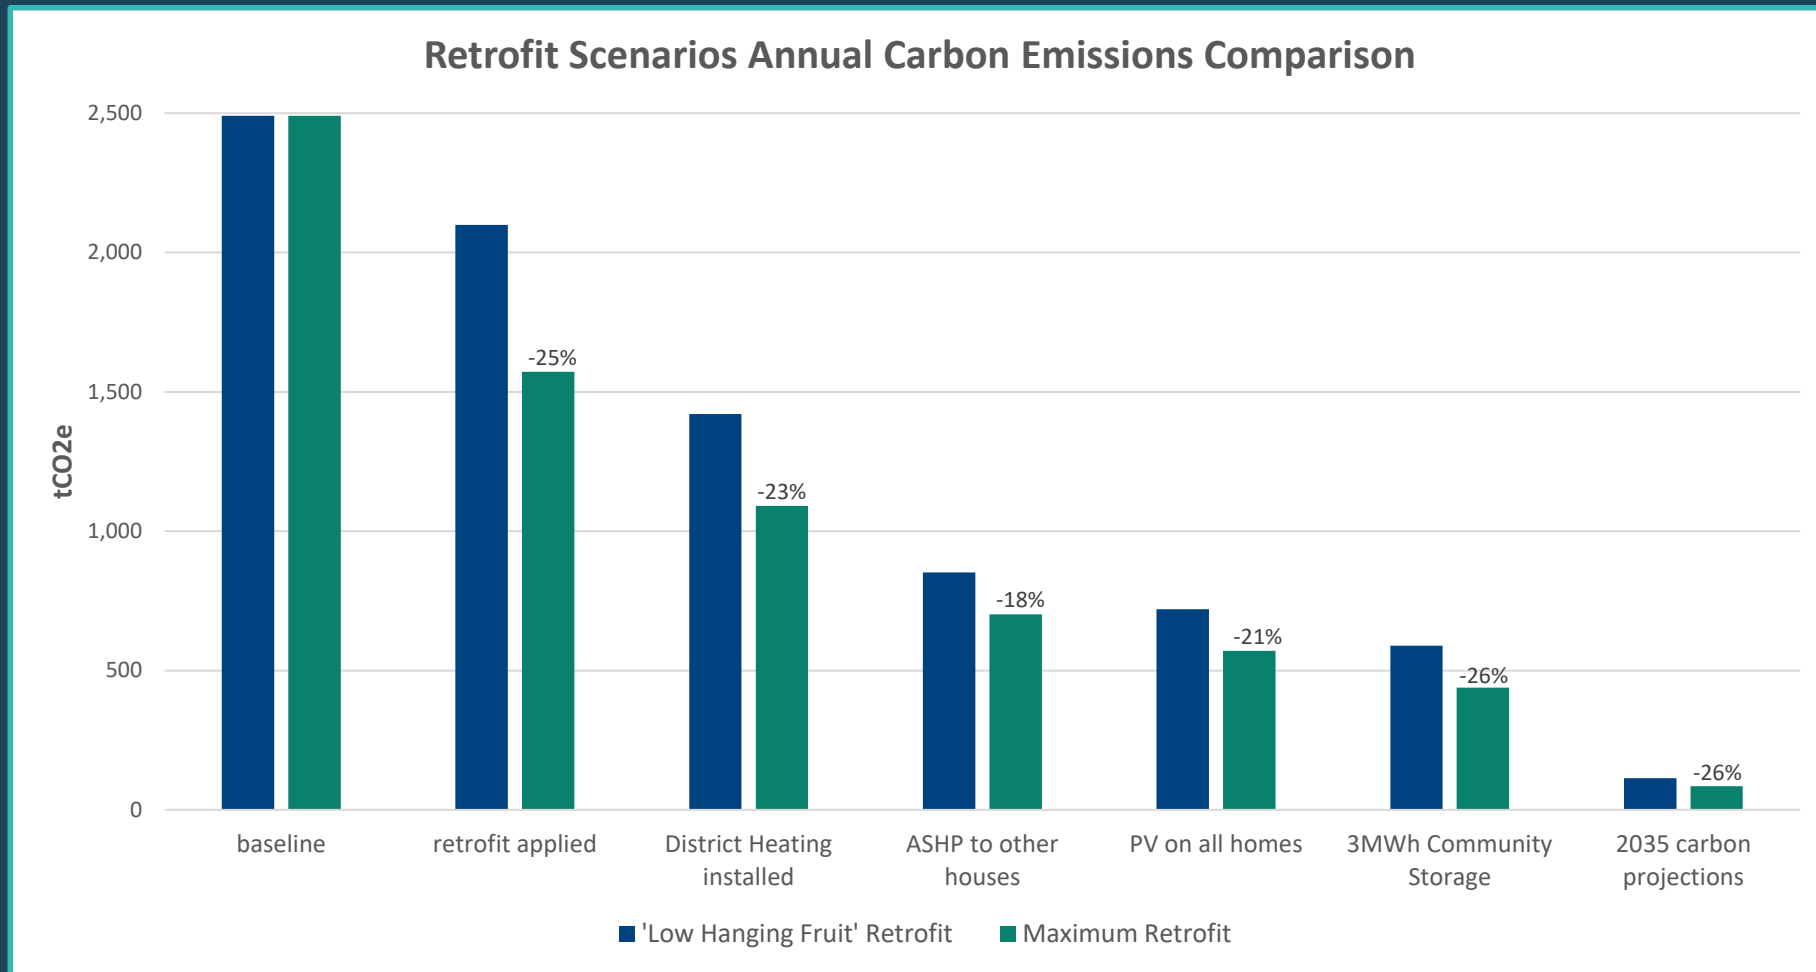

# Retrofit potential Elgin Street

## Retrofit Scenarios

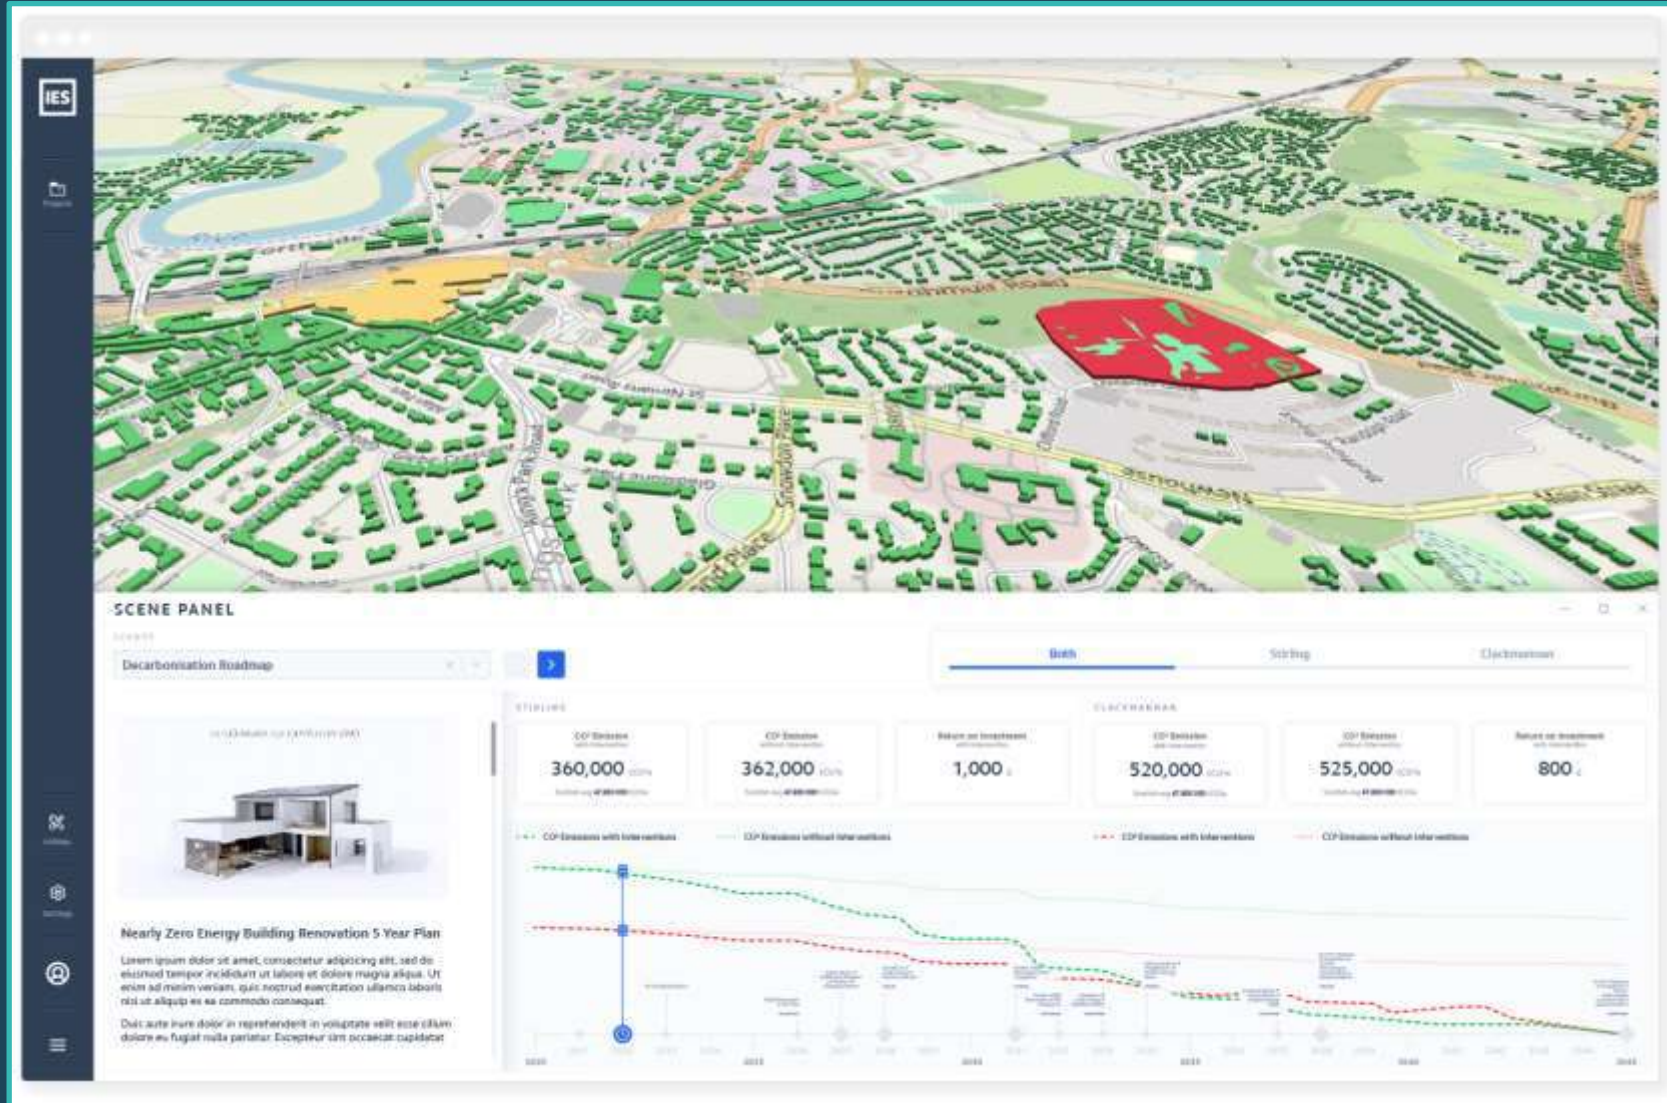

- LHF provides substantial Carbon reduction
- Full retrofit: much higher carbon emissions savings but for an additional investment

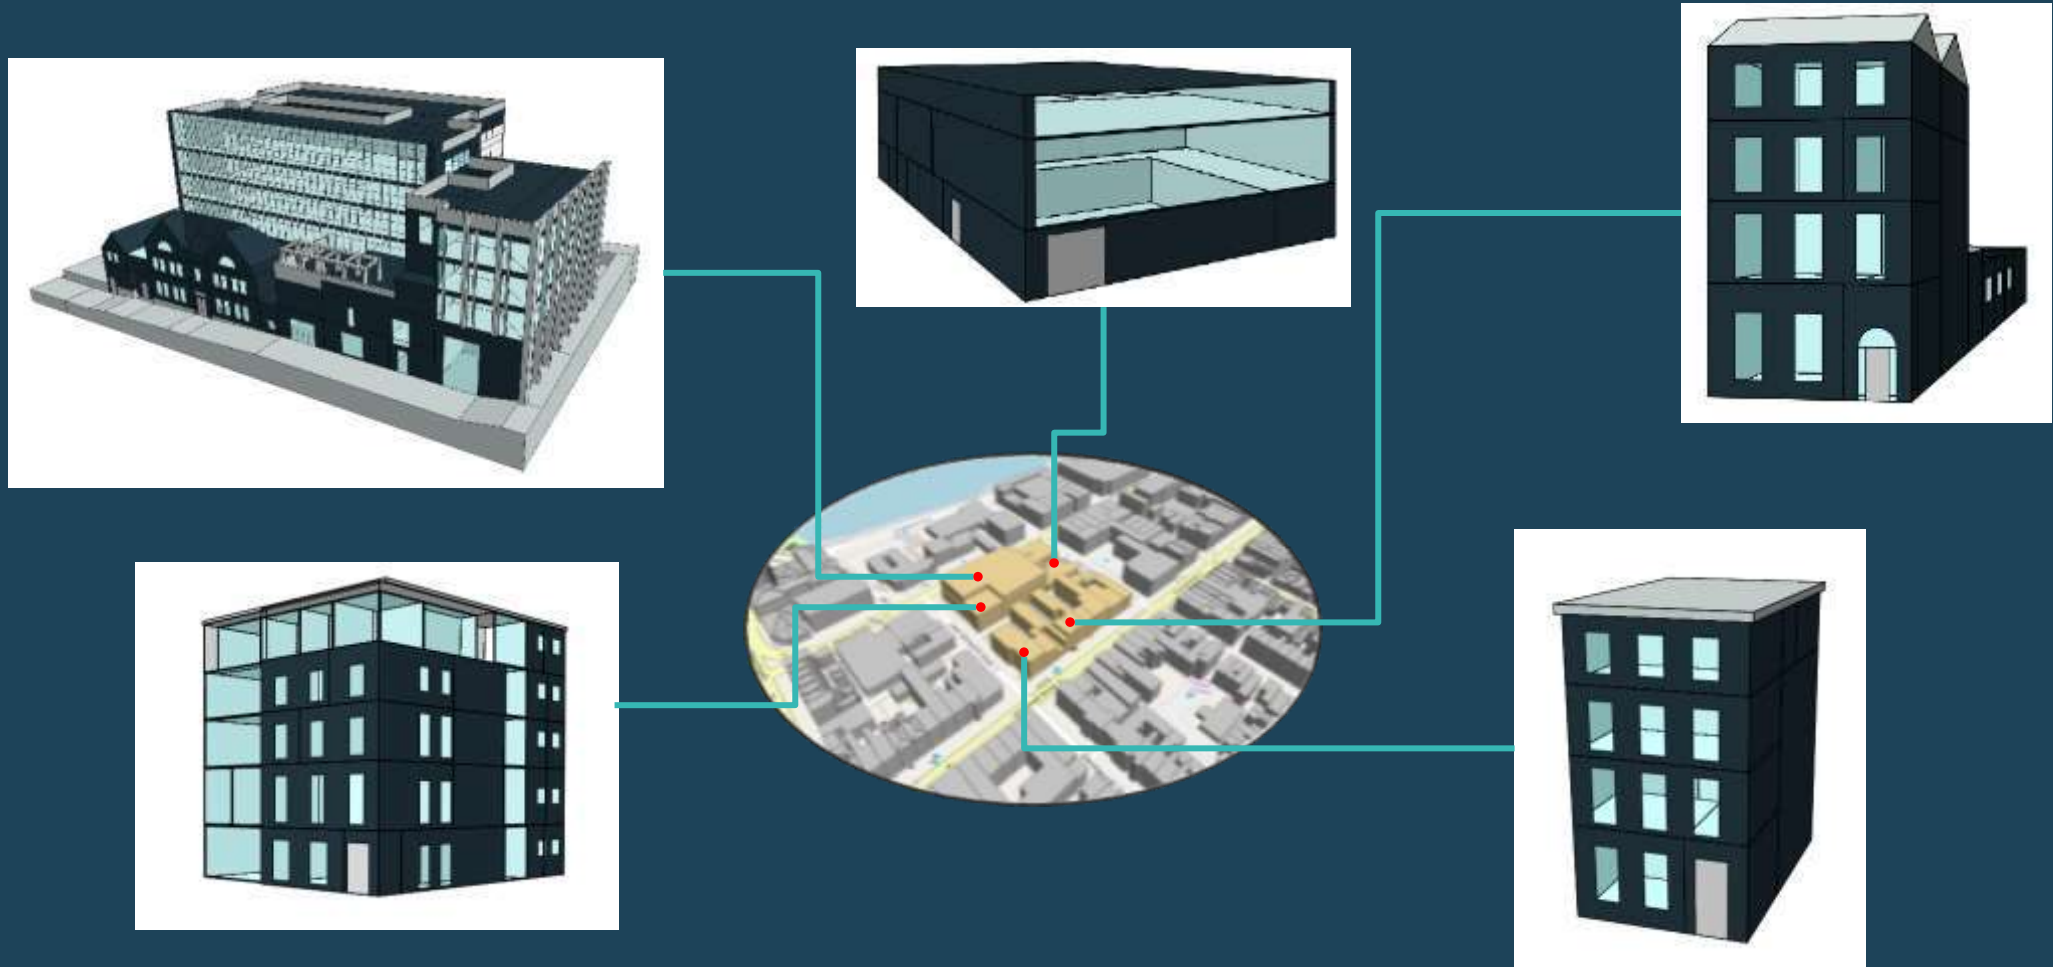

# Optimal Decarbonisation Roadmap: Elgin Street

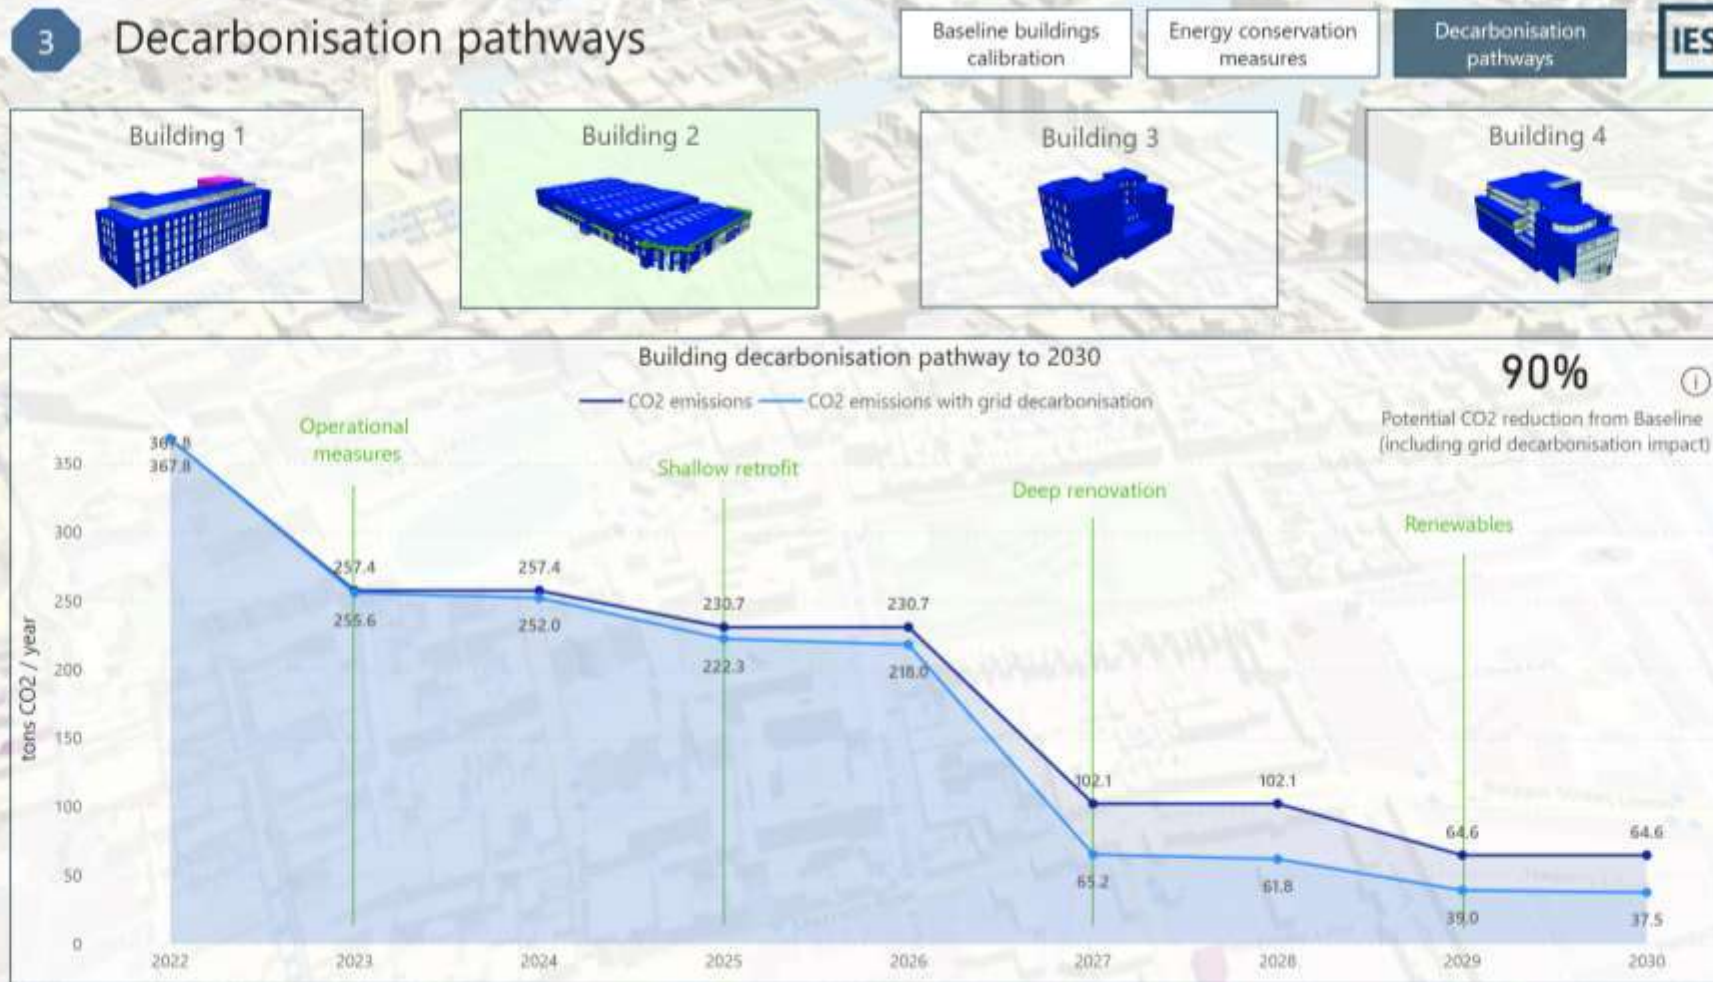

# Net Zero Road Mapping

# Zooming in from city scale to building Level Digital Twins

# Testing decarbonisation scenarios at building level

# Now and next

- Better **design** for both buildings and communities, making better decisions from the outset
- Better **control** for both buildings and communities, optimising energy use, while maintaining health and well-being
- Optimisation and control of individual buildings, within a portfolio, campus, community or city - **intelligent Building Controller**
- Optimisation of the buildings and the assets working together as groups of buildings or communities - **intelligent Community Controller**
- Optimisation of communities working together, sharing resources as and when needed - **intelligent Community Grid**

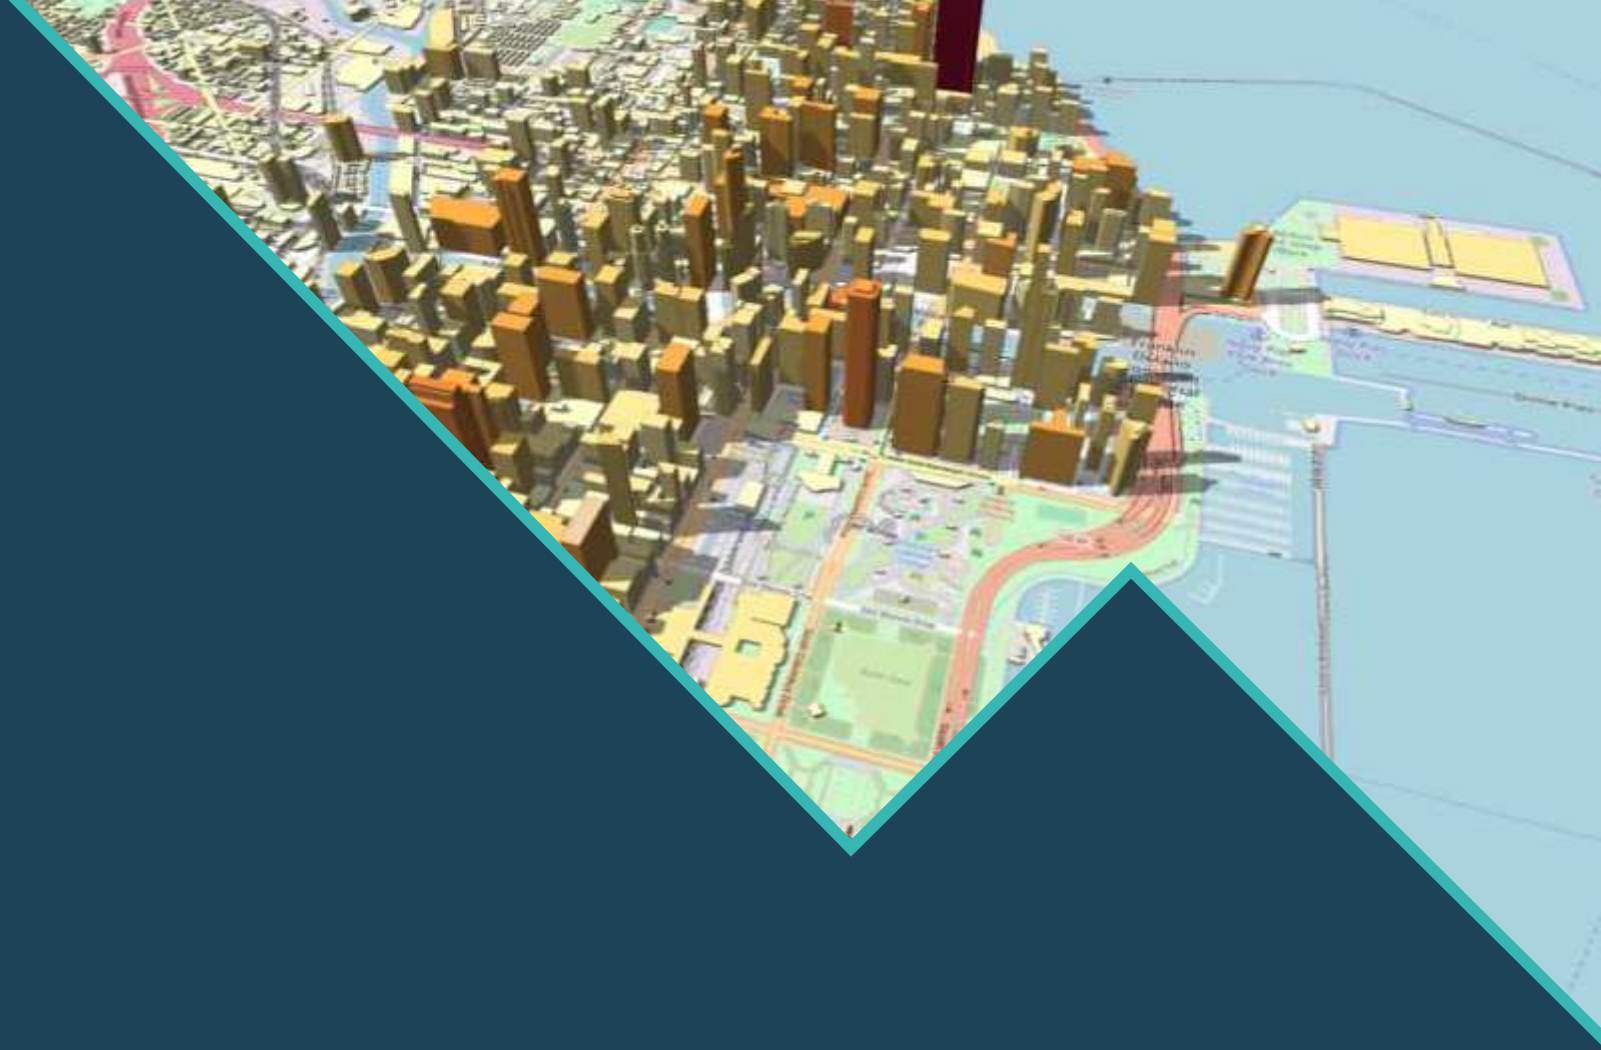

Thank you
