R&D

Optimizing the scientific
knowledge
and technical capacities
to deal with climate change at all levels
and tackle energy transition challenges

Technology

Optimizing the uptake
of climate-smart
and climate - resilient responses

Funding

Optimizing funding mechanisms

Policy

Optimizing institutional,
policy and legal reforms
in the energy sector

CITIES NETWORK | شبكة المدن | RÉSEAU DES VILLES

36%

of CO2
emissions in
the EU

40%

of overall
current energy
consumption
of the EU

Public Buildings play a very significant role in terms of policy relevance as they are a key lever to reach Green House Gas abatements goals.

The current EU policy framework

- A Clean Planet for All strategy
- Energy Efficiency Directive
- The Energy Performance of Buildings Directive

The financial landscape

- Fewer financial instruments / institutions than other clean energy sectors
- Gap between the financial instruments and institutions and those likely to be accessed by the public administration
- The need for a clear and stable regulatory framework
- An additional flow of 177 billions Euro each year from 2021 to 2030 needed to reach the goals of Clean Energy for All package

Key influencing factors

- Macro - economic factors
- Governance and accountability factors
- Technology
- Shortage of good investments projects and opportunities
- Country's enabling framework to support clean energy transition

Policy recommendations from modular projects

Modular projects recommend the following actions

- 1) Capacity - building for local administrations
One - stop shops for technical assistance service
- 2) Standardization of procedures
- 3) Comprehensive energy audits
- 4) Public funding integration
- 5) Specificities of the MED area acknowledged in the regulatory framework
- 6) Uniformity in the definition of N - ZEB

Conclusions and final recommendations

- 1) Knowledge is key
- 2) Clearer interaction between local and national administration levels
- 3) Systematic enforcement of energy audits of public buildings
- 4) No one - size - fits - all approach to improving EE across the EU
- 5) Promotion of cost effective tools such as EPCs or White Certificates

Thank you !
