# Sphere Project

**SPHERE**  
BIM DIGITAL TWIN PLATFORM

Budget: 12,8 M€

SPHERE is a 4-year (2018-2022), Horizon 2020 project that aims to provide a BIM-based Digital Twin Platform to optimise the building lifecycle, reduce costs, and improve energy efficiency in residential buildings.

## OBJECTIVES

25% Reduction in construction time

15% Less energy demand during the operational phase

25% Less CO2 and GHG emissions in buildings

## CONSORTIUM

18 partners from 10 different EU countries

Coordinator: IDP

This project has received funding from the European Union's H2020 programme under Grant Agreement No. 820805.

**SUSTAINABLE PLACES 2021**  
Sep. 28 - Oct. 1, 2021 | Rome, Italy

# Background

Within the last decade, the European Union has developed policies aimed at accelerating the cost-effective renovation of existing buildings, with the vision of a decarbonised building stock by 2050.

One of the potential measure to target these objectives is the EPC

## **Barriers:**

Process complexity

Lack of information about the buildings

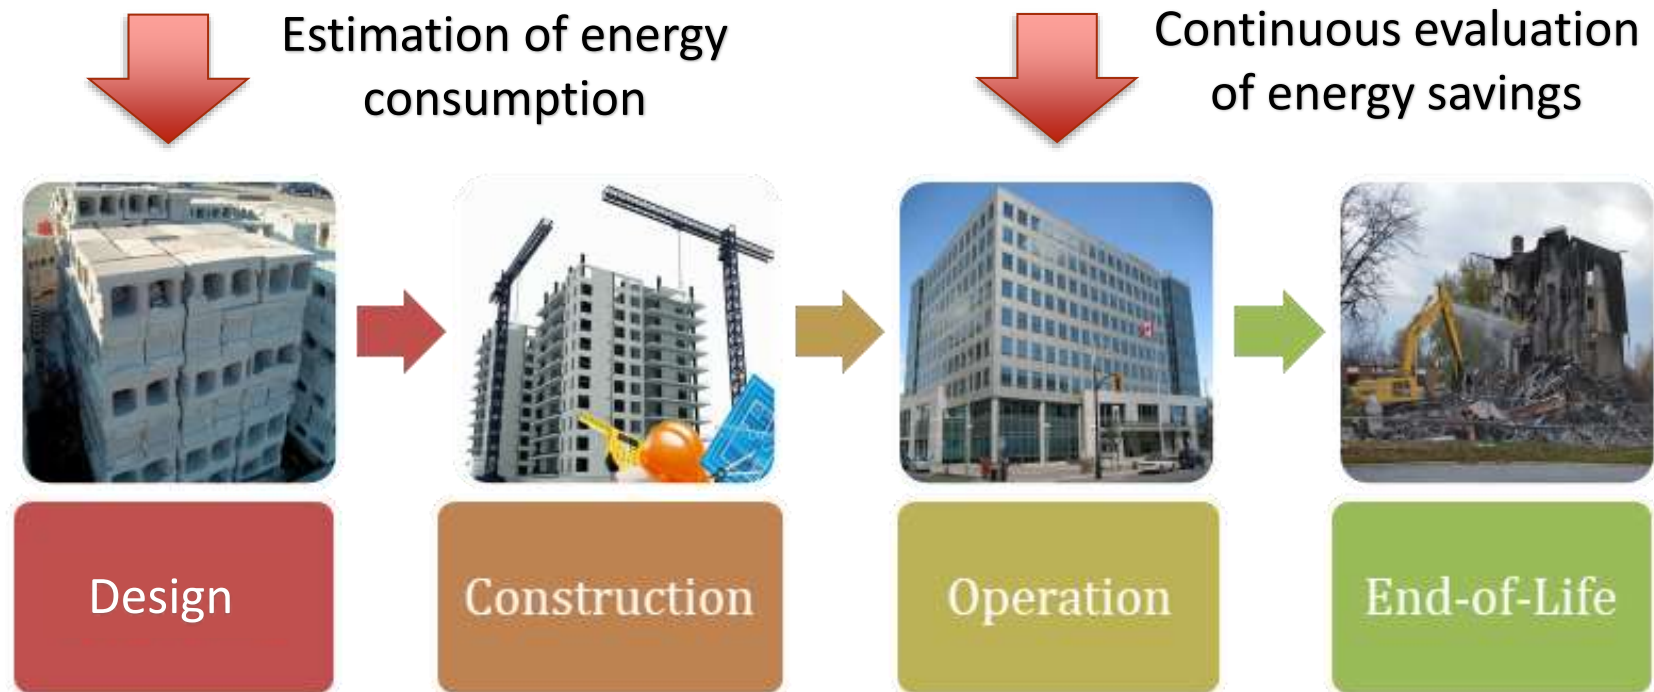

Uncertainty about post renovation's energy performance

(Lee et al., 2015)

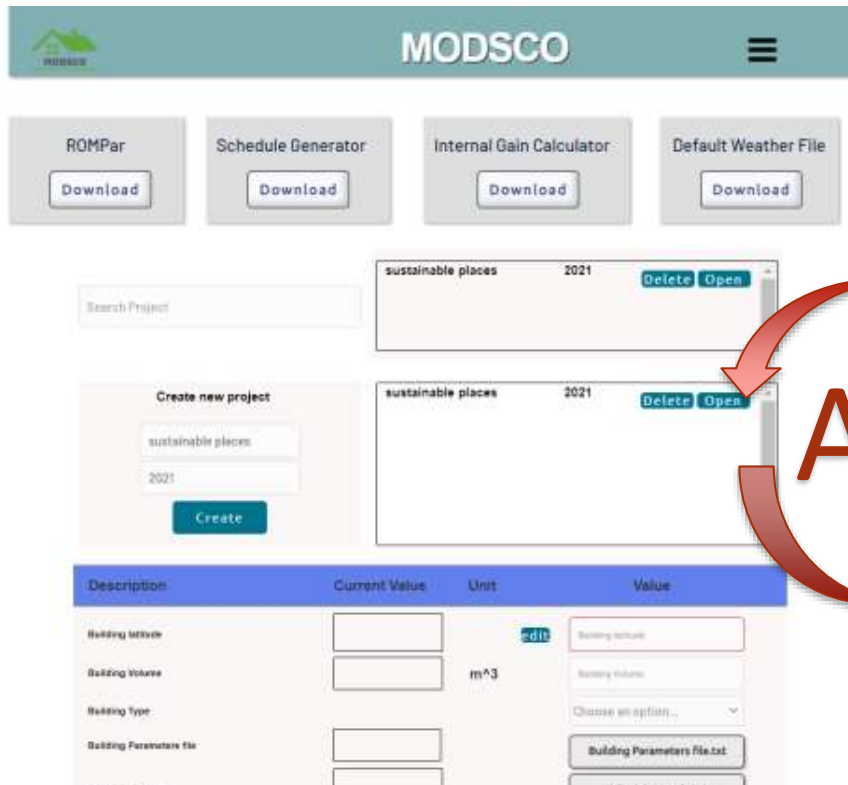

# ModSCO Web Application

ModSCO define a whole building energy model utilising 28 PARAMETERS

# ModSCO Core Platform

The screenshot shows the ModSCO web interface. At the top, there's a header with the ModSCO logo and a menu icon. Below the header, there are four buttons: "ROMPar", "Schedule Generator", "Internal Gain Calculator", and "Default Weather File", each with a "Download" button. In the center, there's a "Create new project" section with a "sustainable places" input field and a "2021" year selector, followed by a "Create" button. To the right, there are two "sustainable places" cards, each with "Delete" and "Open" buttons. At the bottom, there's a table with columns for "Description", "Current Value", "Unit", and "Value".

Description	Current Value	Unit	Value
Building latitude	<input type="text"/>		<input type="text"/>
Building volume	<input type="text"/>	m <sup>3</sup>	<input type="text"/>
Building type	<input type="text"/>		Choose an option...
Building Parameters file	<input type="text"/>		<input type="button" value="Building Parameters file.txt"/>

## Python Script PyFMI and dependencies

```

from pyfmi import load_fmu
import pandas as pd
import matplotlib.pyplot as plt
import numpy as np
import os

Folder_Name = "Simulink"
Path = Folder_Name
if not os.path.exists(newpath):
    os.makedirs(newpath)

# Parameters = ["Building_Volume",
#               "Building_Latitude",
#               "Building_AWinSouth",
#               "Building_AWinNorth"]
# # 1 Building volume = [m3]
# # 2 Building Latitude
# # 3 Windows Area - South
# # 4 Windows Area - North
  
```

## Python Script PyFMI and dependencies

```

from pyfmi import load_fmu
import pandas as pd
import matplotlib.pyplot as plt
import numpy as np
import os

Folder_Name = "Shinai"
newpath = Folder_Name
if not os.path.exists(newpath):
    os.makedirs(newpath)

-----

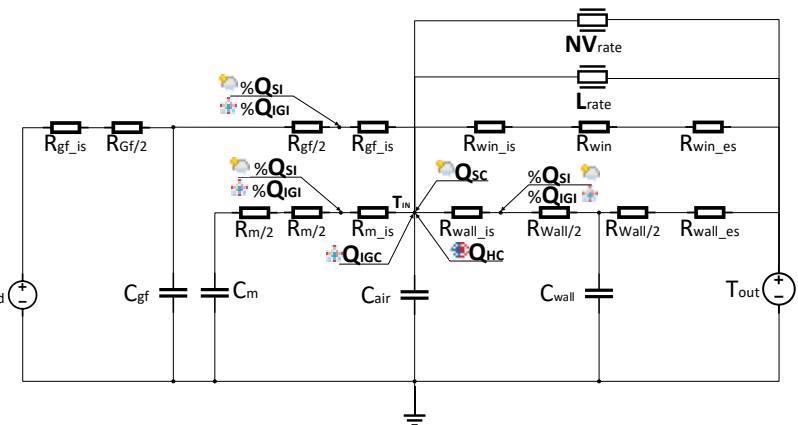

FMU_name = "C:\ros\fm\ROM_V6_CS.fmu"
model = load_fmu(FMU_name, log_level=5) #to load the file

parameters = [{"Building_Volume": " * Building Volume = (m3)",
               "Building_Latitude": " * Building Latitude",
               "Building_AreaSouth": " * Building Area - South",
               "Building_AreaNorth": " * Building Area - North"}

```

ROM\_V6\_CS.fmu

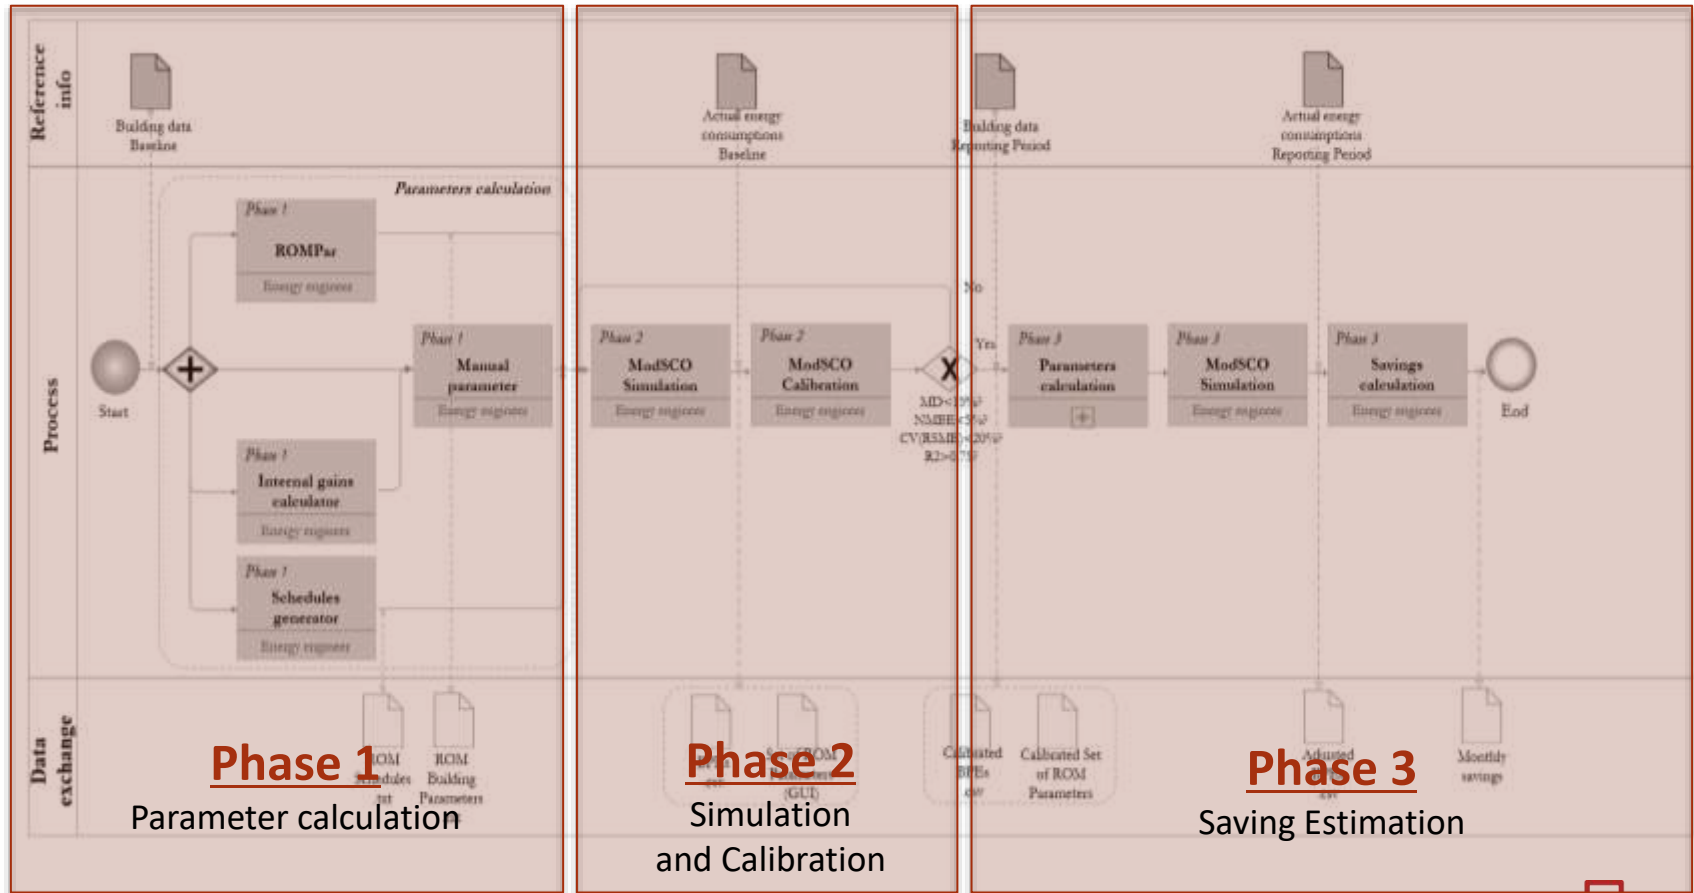

RC-Network of the ROM

- Based on the grey box modelling approach;
- Developed using Modelica in the Dymola Environment;
- Used the thermal network analogies by means of resistances and capacitances.

# ModSCO - Phase 1

## 2019 Data

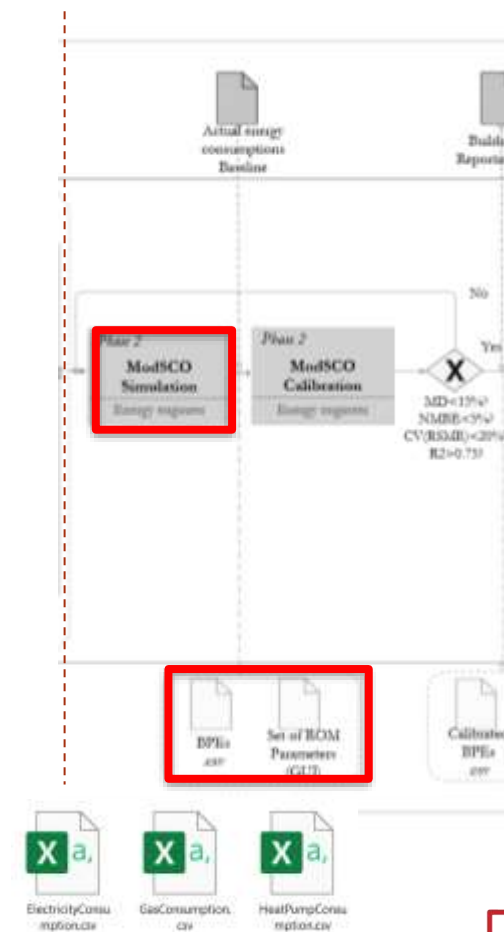

Description	Unit	Value
Building Type (residential or not residential)	-	Not residential
Building/room latitude	-	53.280417
Building/room volume	m3	9282.26
Building Parameters file	-	-
Weather data file .mos	-	Galway 2019
Ground Temperature	°C	15
Maximum heat gain per people	W	18751
Maximum electrical power per lighting	W	14374
Maximum electrical power per equipment	W	18907
StandBy electrical power per lighting/equipment.	W	5991
Maximum cooling Power of the system	W	-10000
Maximum heating Power of the system	W	220000
System equipment electrical power (pumps, fans)	W	9090
StandBy heating power	W	10000
StandBy cooling power	W	0
Heating Setpoint	°C	20
Cooling Setpoint	°C	24
Schedule People ( 3rd spreadsheet)	-	-
Schedule Lighting ( 3rd spreadsheet)	-	-
Schedule Equipment ( 3rd spreadsheet)	-	-
Schedule Heating System ( 3rd spreadsheet)	-	(test 2)
Schedule Cooling System ( 3rd spreadsheet)	-	-
Infiltration Rate	-	2
<b>CALIBRATION PHASE PARAMETER</b>		
Lighting efficiency/utilization	-	1
Equipment efficiency/utilization	-	1
People system influence	-	Not used
Heating system efficiency/utilization	-	1
Cooling system efficiency/utilization	-	1

**TIME : 2 hours to calculate the parameters**

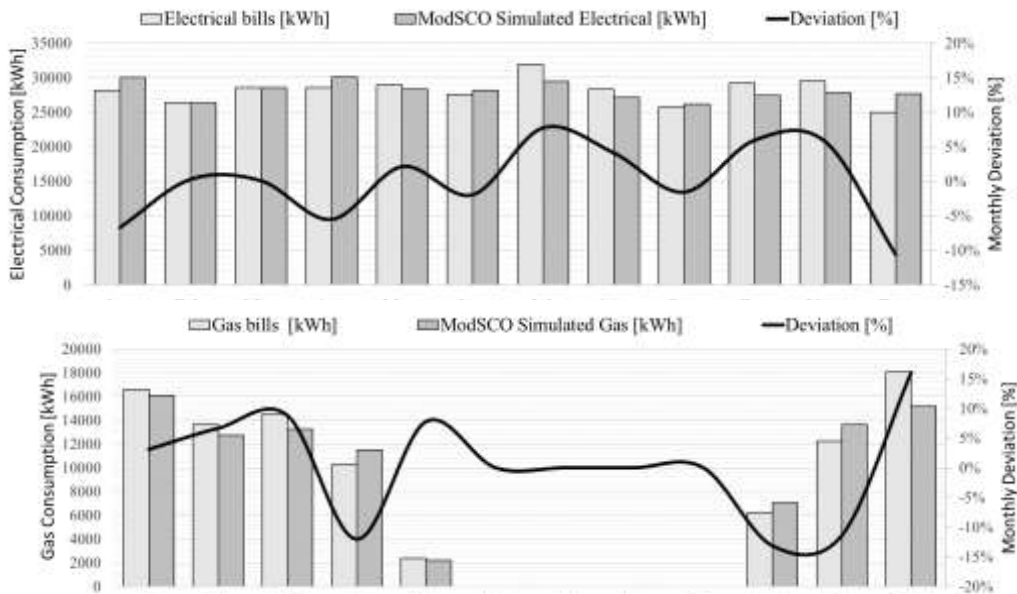

# ModSCO - Phase 2

# ModSCO - Phase 2

Electricity	Natural Gas		IPMVP limits
ModSCO	ModSCO		
0.25%	2.70%	NMBE	< ±5%
6.06%	15.05%	CV-RMSE	< 20%
0.965	0.978	R <sup>2</sup>	> 75%

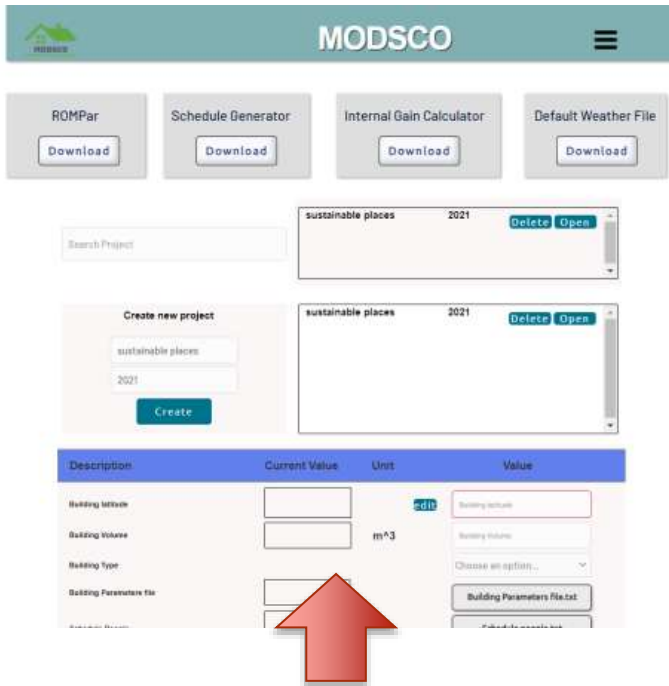

**TIME : 4 hours to calibrate the ModSCO**

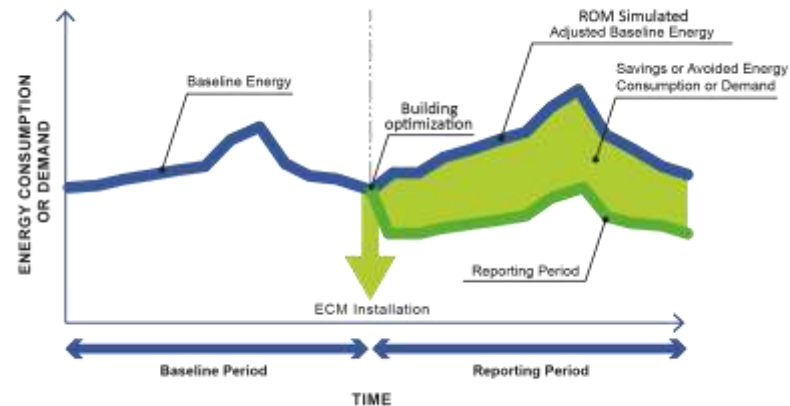

# ModSCO - Phase 3

## Energy Saving Estimation

The screenshot shows the ModSCO web interface. At the top, there are navigation buttons for ROMPar, Schedule Generator, Internal Gain Calculator, and Default Weather File, each with a 'Download' button. Below this is a search bar and a 'Create new project' section with a 'Create' button. A table with columns 'Description', 'Current Value', 'Unit', and 'Value' is visible, with a red arrow pointing to it from the text below.

Updated with data referred to  
the Reporting Period  
(after implementation ECMs)

# ModSCO vs IES-VE comparison

## ModSCO Model

6 hours

VS

## IES-VE Model

40 hours

Electricity		Natural Gas			IPMVP limits	
ModSCO	IES-VE		ModSCO	IES-VE		
0.25%	1.18	NMBE	2.70%	-0.66	NMBE	< ±5%
6.06%	7.49	CV-RMSE	15.05%	13.30	CV-RMSE	< 20%
0.965	0.93	R <sup>2</sup>	0.978	0.983	R <sup>2</sup>	> 75%

# ModSCO conclusion

---

**The MODSCO Web application provides :**

- A quick and accurate method for a reliable quantification of energy savings achieved through Energy Conservation Measures (ECMs);
- A easy to use tool for quick evaluation of Building energy consumption;
- A novel methodology to support Measurement and Verification (M&V) in case of uncertainty in building retrofit;

**The ModSCO Web Application will be available by the end of December 2021**

Thank you for your attention
