Digital Construction and BIM in the EU

DIGITISATION AND RENOVATION WAVE

Digitisation of the building sector, a key enabler for the renovation wave

SEP. 6TH – SEP 9TH, 2022 NICE, FRANCE

SUSTAINABLEPLACES.EU

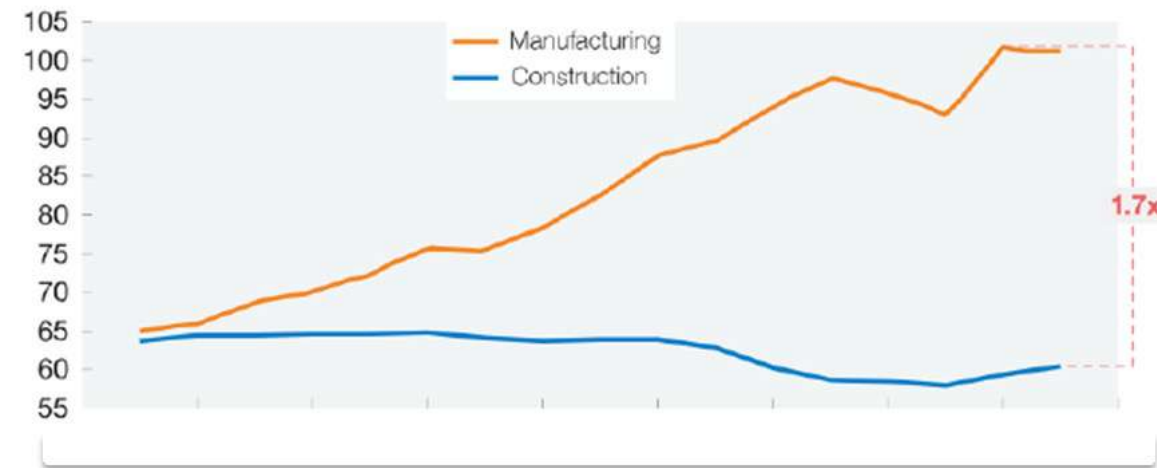

An important construction sector with a long record of poor performances...

- 1.3 trillion (1012) (EU) / 9 trillion (Worldwide)
- 8 % GDP
- 18 million direct jobs + indirect jobs
- 3.1 million organizations (95% SMEs)

Productivity in manufacturing has nearly doubled whereas in the construction sector it has remained flat (and in some areas has even dropped)

\$ thousand per worker

Source: Expert interviews; IHS Global Insight (Belgium, France, Germany, Italy, Spain, United Kingdom, United States); World Input-Output Database

McKinsey&Company

...but it's not only about productivity

The built environment (all human-made space in which people live, work, and recreate) strongly affects the economic, environmental and social development as a whole ...

It needs to be:

- Healthy
- Comfortable
- Safe
- Affordable
- Flexible
- Sustainable
- ...

Renovation, a major challenge

- Most (app. 75%) of those existing buildings are not energy-efficient (built without any energy performance requirement)
- Today, only 11% of the EU existing building stock undergoes some level of renovation each year. Across the EU, deep renovations that reduce energy consumption by at least 60% are carried out only in 0.2%
- At this pace, cutting carbon emissions from the building sector to net-zero would require centuries... It is time to act !!!

EU renovation wave strategy

To pursue this ambition, the Commission published on 14 October 2020 a new strategy to boost renovation

- It aims at doubling the rate of renovations and decarbonising the European Building stock.
- It also aims at contributing to the green and digital transition in Europe from the buildings and construction perspective.
- Three areas of action are also mentioned : the **digital building logbooks**, the **digital building permits**, and the use of **BIM for public procurement**.

Bringing together national efforts into a common and aligned European approach to develop a world-class digital construction sector

WHAT IS THE EU BIM TASK GROUP?

European platform of **public procurers and policy makers** who bring together the collective expertise and purchasing power for a **successful implementation of BIM** in Europe.

ROLE OF THE EU BIM TASK GROUP

Demand side

1. Public authorities (and EC)
2. Public procurers

Enablers

(CEN, ISO, bSI, OGC, ...)

Supply side

Construction
lifecycle sector

THE EU BIM HANDBOOK

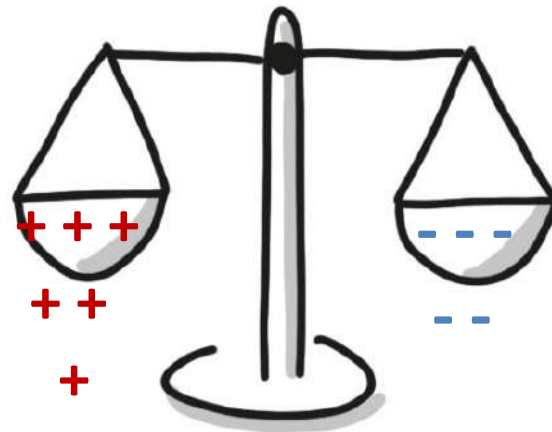

The handbook provides a central reference point for the **introduction of BIM in the European public sector** and aims to equip Government and public sector construction clients with the knowledge for their BIM deployment journey.

Now available in **23 languages!**
www.eubim.eu/handbook-selection

Cost-benefit analysis for the use of BIM

Cost-benefit analysis for the use of BIM in public projects

OBJ 1 - Cost-Benefit Model development

the development of a methodology and creation of a tool that measures the costs and benefits of using BIM in public construction projects, taking into account expenditures, revenues and non-monetary benefits

OBJ 2 – Model validation and case studies

the validation of the CBA-tool, demonstrating its relevance and practical applicability through six case studies representing various types of projects

OBJ 3 – Handbook creation

writing an informative and easy-to-use handbook addressed to EU public entities who want to use the tool and learn more about the methodology

2 – Model validation and case studies

Construction of a sport centre

Maintenance and renovation project of a road

New port construction project

Renovation project for a public building

Public administrative building construction

New residential building construction project

BIM in Public Procurement

White paper

BIM is not obligatory, but it is suggested.
EU Directive for Public Procurement in 2014

For public works contracts and design contests, Member States may require the use of specific electronic tools, such as of building information electronic modelling tools or similar. In such cases the contracting authorities shall offer alternative means of access, as provided for in paragraph 5, until such time as those tools become generally available within the meaning of the second sentence of the first subparagraph of paragraph 1

<https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32014L0024>

Accelerating the Green, Digital and Resilient Transition by Implementing Building Information Modelling in Public Procurement

EU BIM Task Group Position Paper

With the green, digital and resilient transition, the European Union has set ambitious goals for the construction industry. This means we need to develop and manage our built environment more holistically and with considerably less waste.

Building Information Modelling (BIM) methodology is one of the key tools for improving efficiency and achieving better value in the delivery of construction projects. Governments and public procurers across Europe and around the world are recognising the value of BIM¹ as a strategic enabler for cost, quality, and policy goals. This notion has also been echoed in the [High Level Construction Forum \(HLCF\)](#) meetings, an initiative started by the European Commission with the purpose to co-create the green, digital and resilient transition pathway for the EU construction industry ecosystem.

The EU Public Procurement Directive of 2014 encourages public entities to use BIM but a lot has changed since 2014 and the time is ripe to set up more incentives for the better use and integration of built environment data in public procurements. There is still a big gap between the standards and the way work is actually being done.

The use of BIM has significantly increased² and many countries in Europe have already set up national BIM mandates and programmes. Digitization is happening at an ever-increasing rate and the amount of data needed to make decisions has grown exponentially. Stakeholders require the whole spectrum of built environment data that integrates BIM with digital twins, big data, AR/VR, IoT, GIS etc.

The Government and public sector clients (public clients) represent the construction industry's single biggest client and therefore have a strong influence on the whole industry. The objective of European public clients represented in the EU BIM Task Group is to:

- Accelerate the EU green and digital transitions

¹ Calculating Costs and Benefits for the use of Building Information Modelling in Public tenders Methodology Handbook

² EU Construction Sector Observatory Report, page 38-39

High Level Construction Forum

HIGH LEVEL
CONSTRUCTION
FORUM

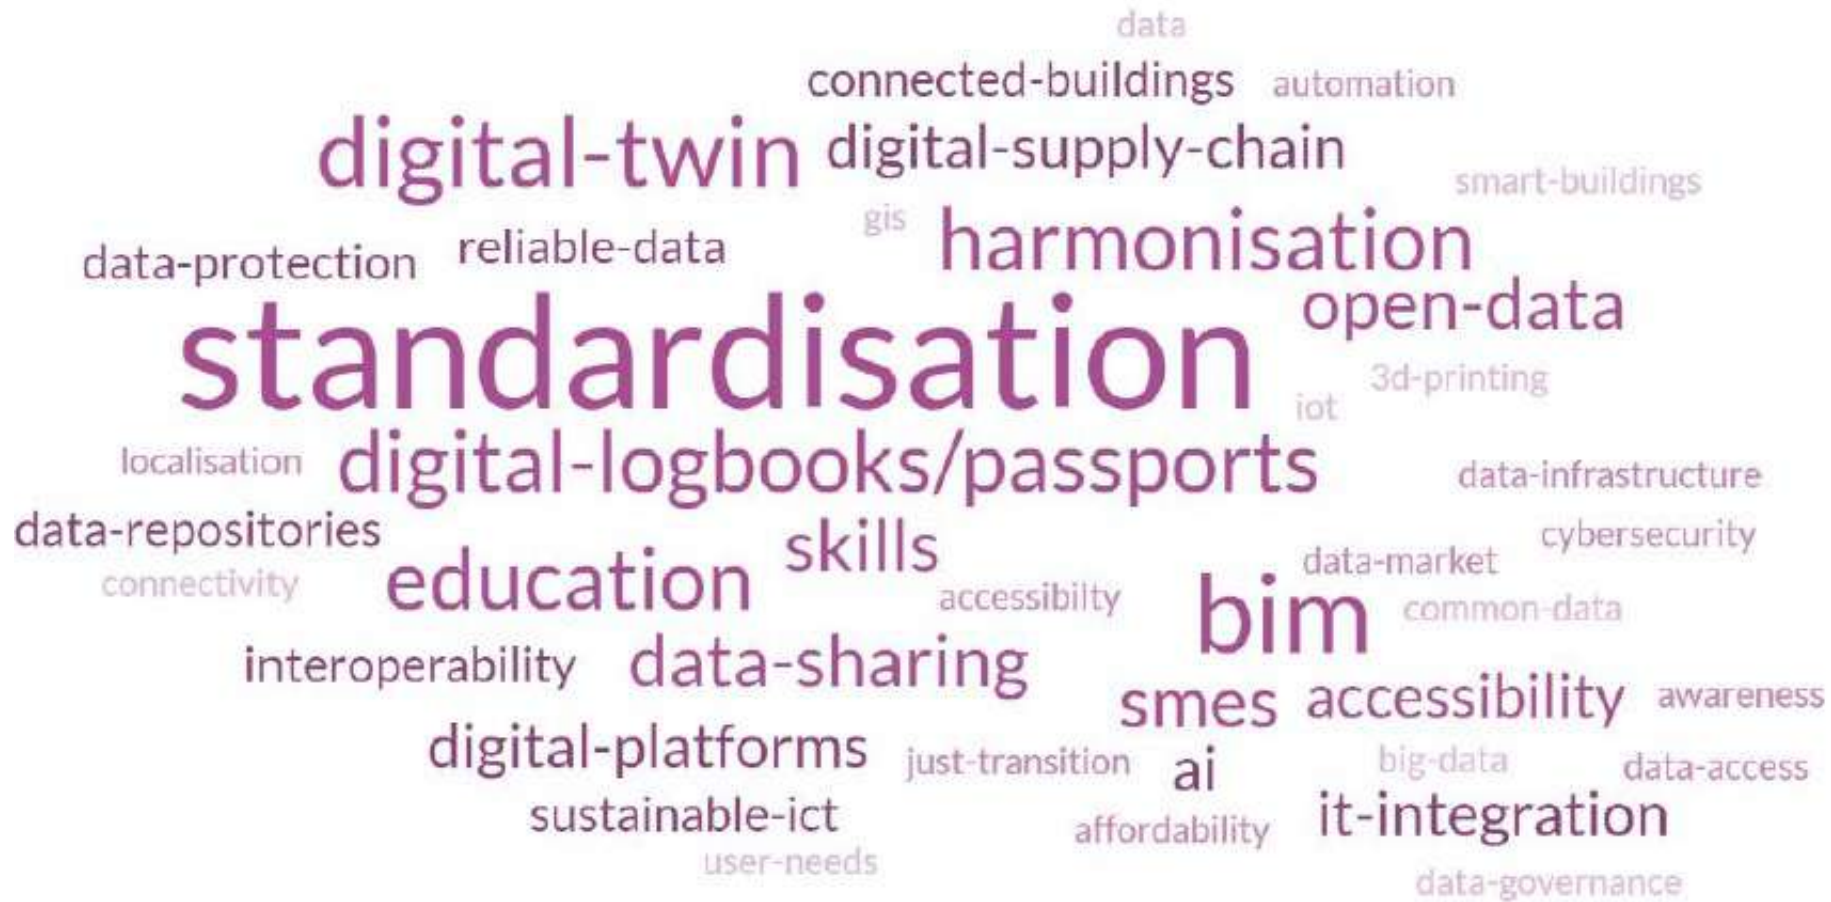

Aim: initiate the co-creation process of a transition pathway towards a green, digital and resilient construction ecosystem.

About 220 representatives from industry, EU countries, European Commission, social partners and other stakeholders joined to exchange on the main priorities and themes of the HLCF.

Digital session:

- Trust, collaboration and interoperability can allow better sharing of data and as a result support greening and resilience.
- Public demand through public procurement as a lever for innovation and standardisation (e.g. open BIM).
- The EU Data act can help level the playing field.

Energy audit report format

In the Energy Audit Report the main characteristics of the hospital energy consumption are summarized. In particular, the form reports the following characteristics:

- Building location
- Heating and Cooling Degree Days
- Area of the building (gross, net, heated, cooled)
- Preliminary building use
- Energy use and comparison among the hospitals
- Energy use breakdown
- Special loads (medical equipment, server room, lifts,)
- Energy bills report
- Building shell characteristics
- Lighting systems
- HVAC systems
- Domestic Hot Water system

The information of the hospitals will be collected during the audit and the report will be revised with the contribution of the partners that will conduct the energy audit.

- BIM is not only 3D
- BIM is not only of di

- The added-value is in the data
- BIM as a methodology

For an energy renovation project based on BIM

STEP 1: Define the data you need

Typical energy renovation

What data do we need?

What?

- Guarantee energy performance
- Estimate the cost
- Estimate carbon impact
- Estimate reusability

How?

- Energy simulation
- Cost analysis
- Life cycle analysis
- Reusability audit

Typical energy renovation

What data do we need?

How?

- Energy simulation
- Cost analysis
- Life cycle analysis
- Reusability audit

Which data?

- Envelope, insulation, thermal resistance, window glazing...
- Material cost, BoQ, manpower...
- BoQ, carbon value...
- Material passport, damage status...

For an energy renovation project based on BIM

STEP 1: Define the data you need

STEP 2: Choose the tools to create your model

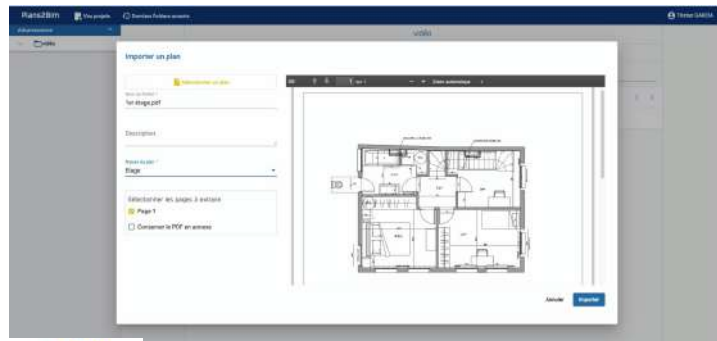

Need geometry?

Conclusions on BIM based digitilization of building

➤ For the users

- Your needs are your driver
- Choose wisely! The model you create needs to answer your needs. But going too far may lead to chaos.
- Do it right ! Find the right tools

➤ For the developers

- Listen to the clients needs
- Make it simple, direct ! → easier to market
- Plenty of tools exist... but opportunities (AI on images, text...) and ensure interoperability

➤ For all

- Do not wait for things to happen: test and be actors

Round table on current trends and future outlooks

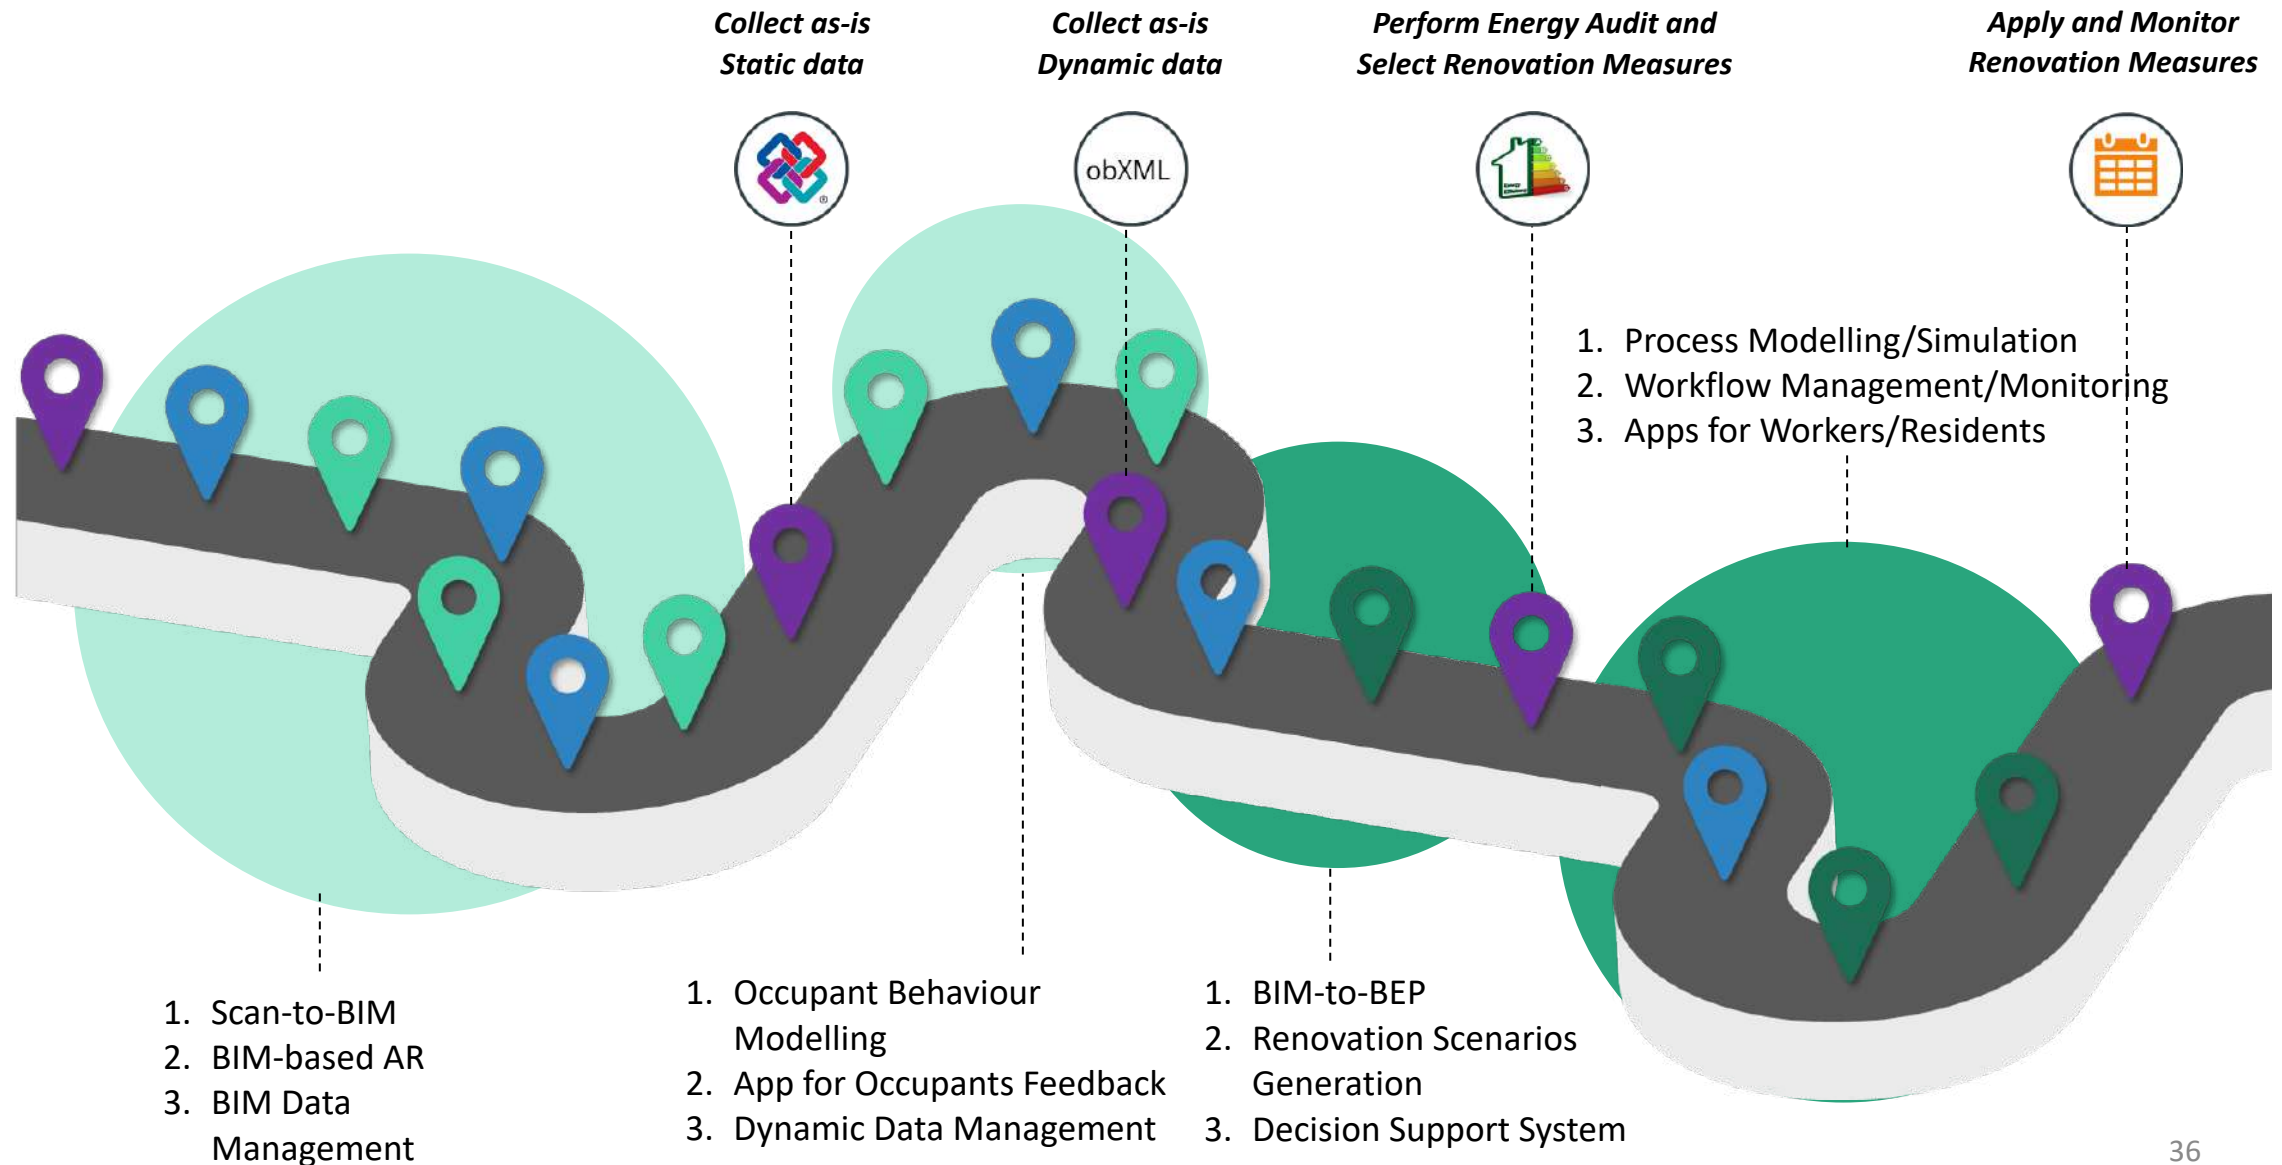

Lessons learnt

from BIM-based decision support tools

Giorgos Giannakis

Building Renovation: Digitisation in 3 Phases

Collect as-is
Static data

Scan-to-BIM

- ✓ Developers: Low quality of input data affects the quality of Scan-to-BIM results.
- ✓ Users: Compliance with open format files enables interoperability; Reading and editing the output files in commercial BIM tools (e.g. REVIT) is required.

BIM enhancement with Augmented Reality

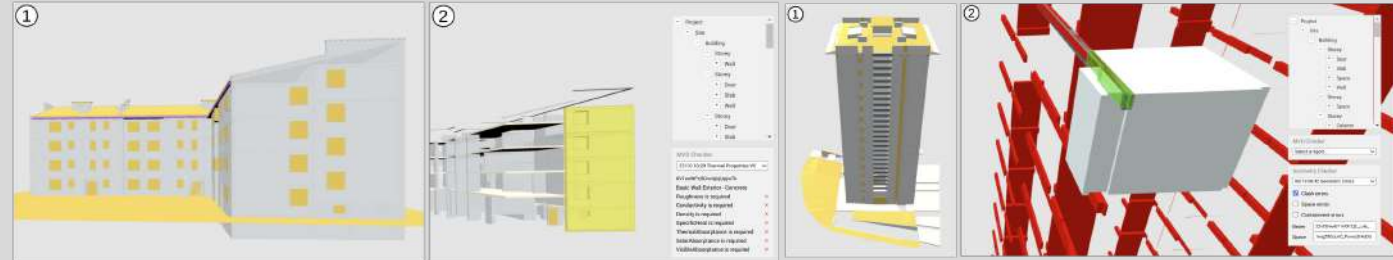

- ✓ Developers: Real-time IFC editing is a challenging task; A stable connection is required; Accurate representation of BIM geometry improves the UX.
- ✓ Users: High potential to improve communication and feedback on site; high hardware cost may hamper its replicability; initial training is required for all new users to get familiar with Smart Glasses.

Collect as-is
Static data

BIM Management Platform

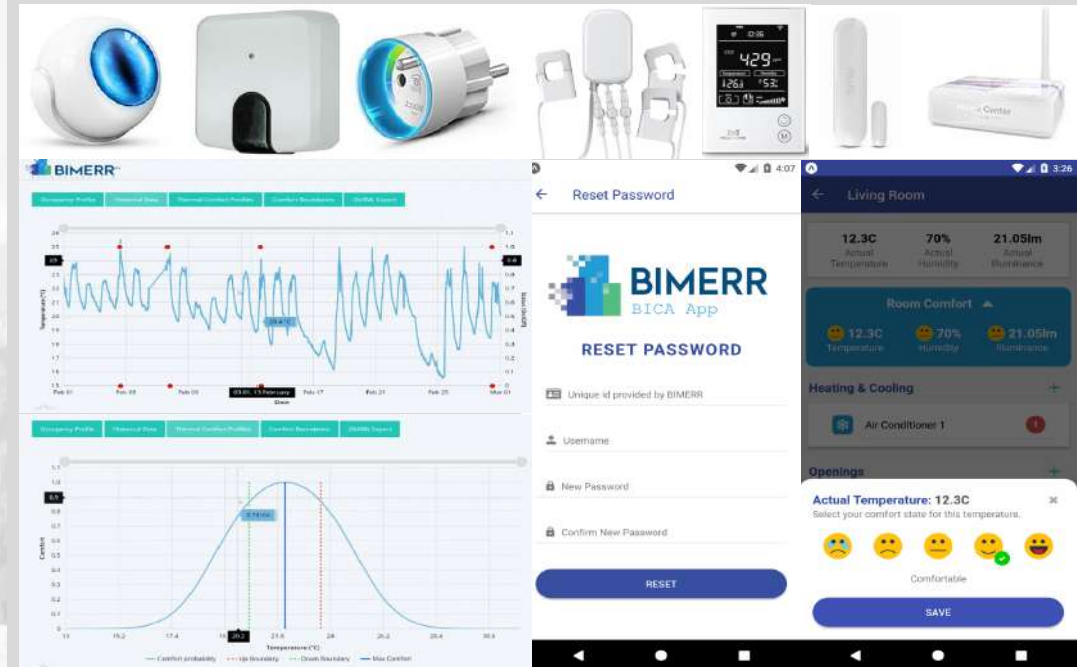

- ✓ Developers: Creating an error-free BIM model is a challenging task; Automating the data compliance, completeness and correctness checks reduces significantly the detection and correction of errors or missing information; A viewer for visualising the checks results streamlines the error correction process.
- ✓ Users: BIM file optimisation, BIM file, MVD checking, clash-error detection, and visualisation of BIM geometry are helpful features; a BIM Management Platform should provide open APIs to seamlessly query BIM data that satisfy specific criteria.

As-is Data Collection Phase – Lessons Learnt

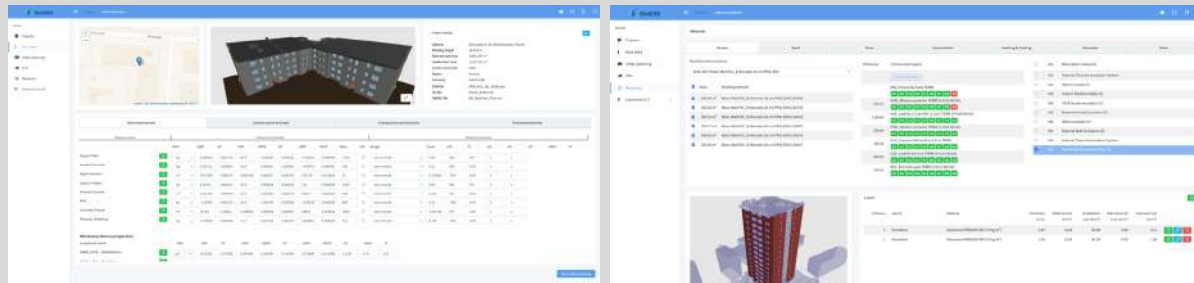

From IoT data to ML-based Profiling of Assets Usage

- ✓ Developers: IoT equipment commissioning, and maintenance are non-trivial tasks; higher IoT data granularity -> improved occupant behaviour modelling results.
- ✓ Users: main enabler to reduce the gap between measured and simulated performance; profiling data in a UI -> a nice to have feature; Receiving feedback from residents without the need for a physical conversation adds significant value.

BIM-based Renovation Decision Support

- ✓ Developers: A rich material and components database is the key; The know how renovations measures could be combined is a must; Calibration of the models should always be considered (IPMVP – Option D).
- ✓ Users: Great commercial potential; Improved accuracy of BEP estimation and significant reduction of the time required for the Energy Audit.

Building Performance Simulation

- ✓ Developers: Significant expertise on BIM & physics-based BEPs domain is required; Psets definition formalises the way BEPs data are captured and makes the automated BIM-to-BEP transformation less error-prone.

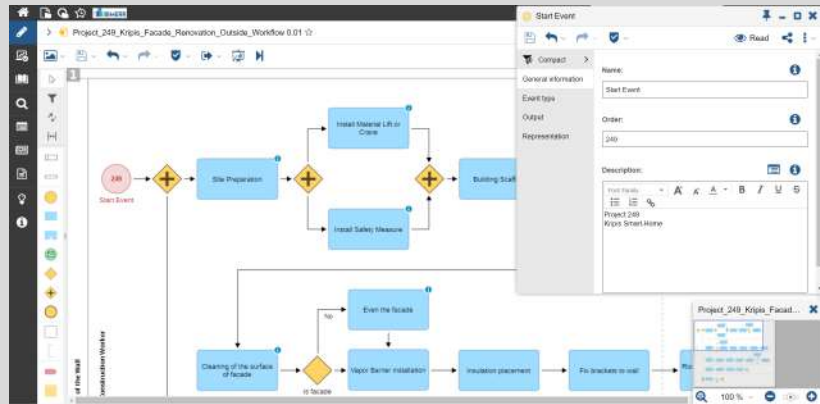

*Perform Energy Audit and
Select Renovation Measures*

*Apply and Monitor
Renovation Measures*

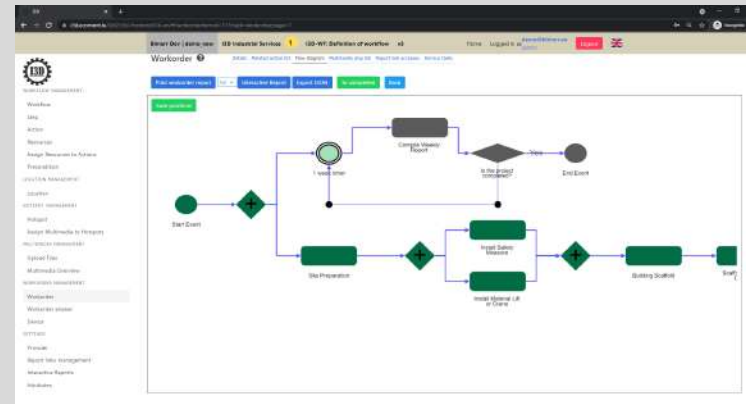

Planning & Construction Phase: Lessons Learnt

Process Modelling and Simulation

- ✓ Developers: Reuse of Renovation Process Model templates reduces the time required for the BPMN preparation for a renovation project.
- ✓ Users: Added value in large renovation projects.

Workflow Management & Monitoring

- ✓ Developers: Make the BIM-based Workflow M&M services compatible with existing tools.
- ✓ Users: AEC industry seems not to be not-ready to replace its as-usual practices.

Audit and Measures

Apply and Monitor Renovation Measures

Workers and Residents Support

- ✓ Users: Apps for workers -> Mobile apps instead of Smart Glasses; Apps for residents -> Notifying residents about upcoming renovation works near their apartments is important

Thank you!

Case Studies

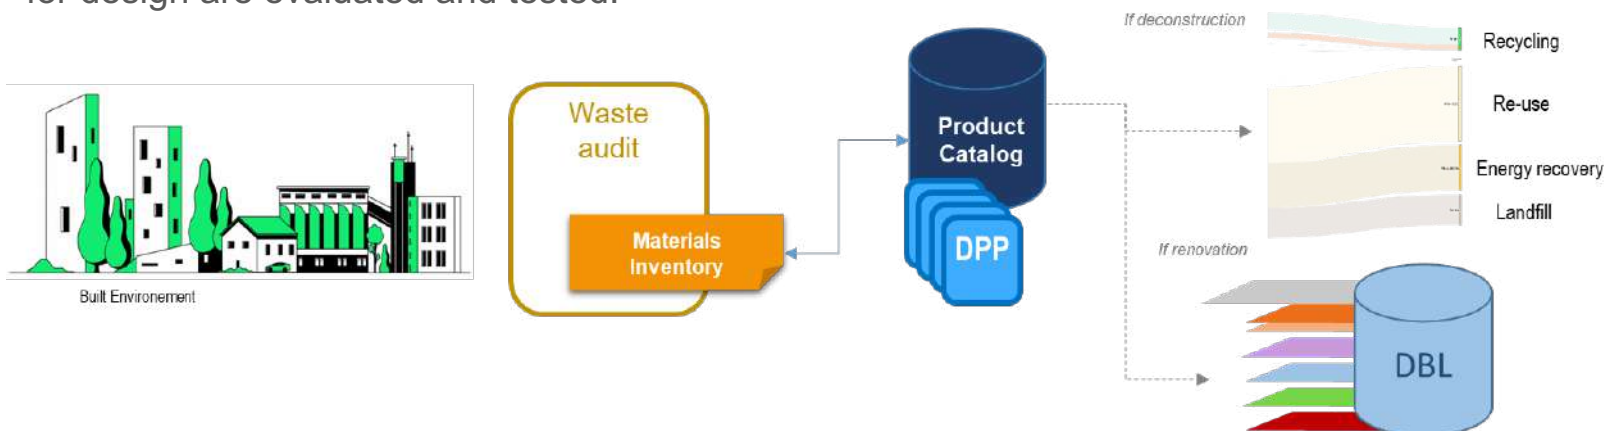

Cradle to Cradle digital continuity (1/3)

#03 – Waste Audits

This case study focused on delivering Waste Audits for future projects integrated with the early phases of design.

Aimed to structure new formats, using Data Templates, to foster products circularity, by using the same data and the same structures of their initial characterization.

As well, digital technologies to streamline the waste audit and to glue it as part of the diagnosis for design are evaluated and tested.

Cradle to Cradle digital continuity (2/3)

#03 – Digital technologies and integration with the design

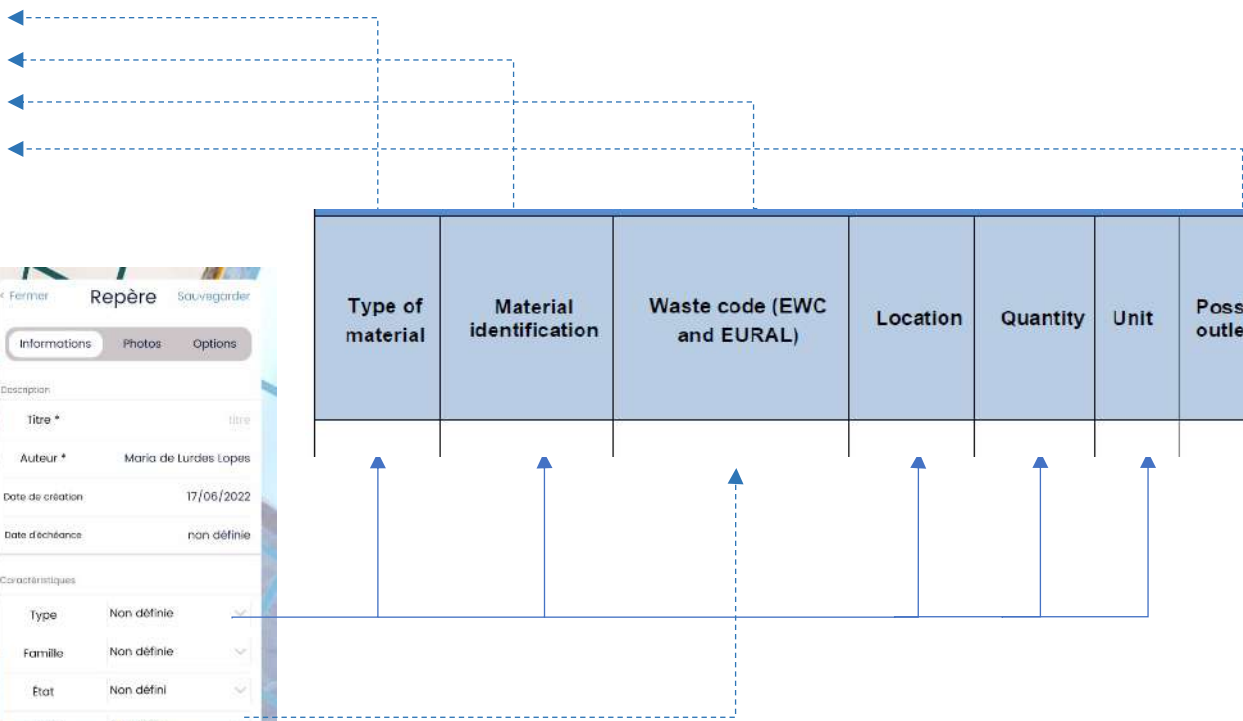

In collaboration with: 

Cradle to Cradle digital continuity (3/3)

#03 – Data that enables circularity (properties for new products, for desconstruction, for other processes...)

Type of material	Material identification	Waste code (EWC and EURAL)	Location	Quantity	Unit	Possible outlets ¹	Recommended outlet ²	Precautions to take during the deconstruction phase ³	Pictures and notes
------------------	-------------------------	----------------------------	----------	----------	------	-------------------------------	---------------------------------	--	--------------------

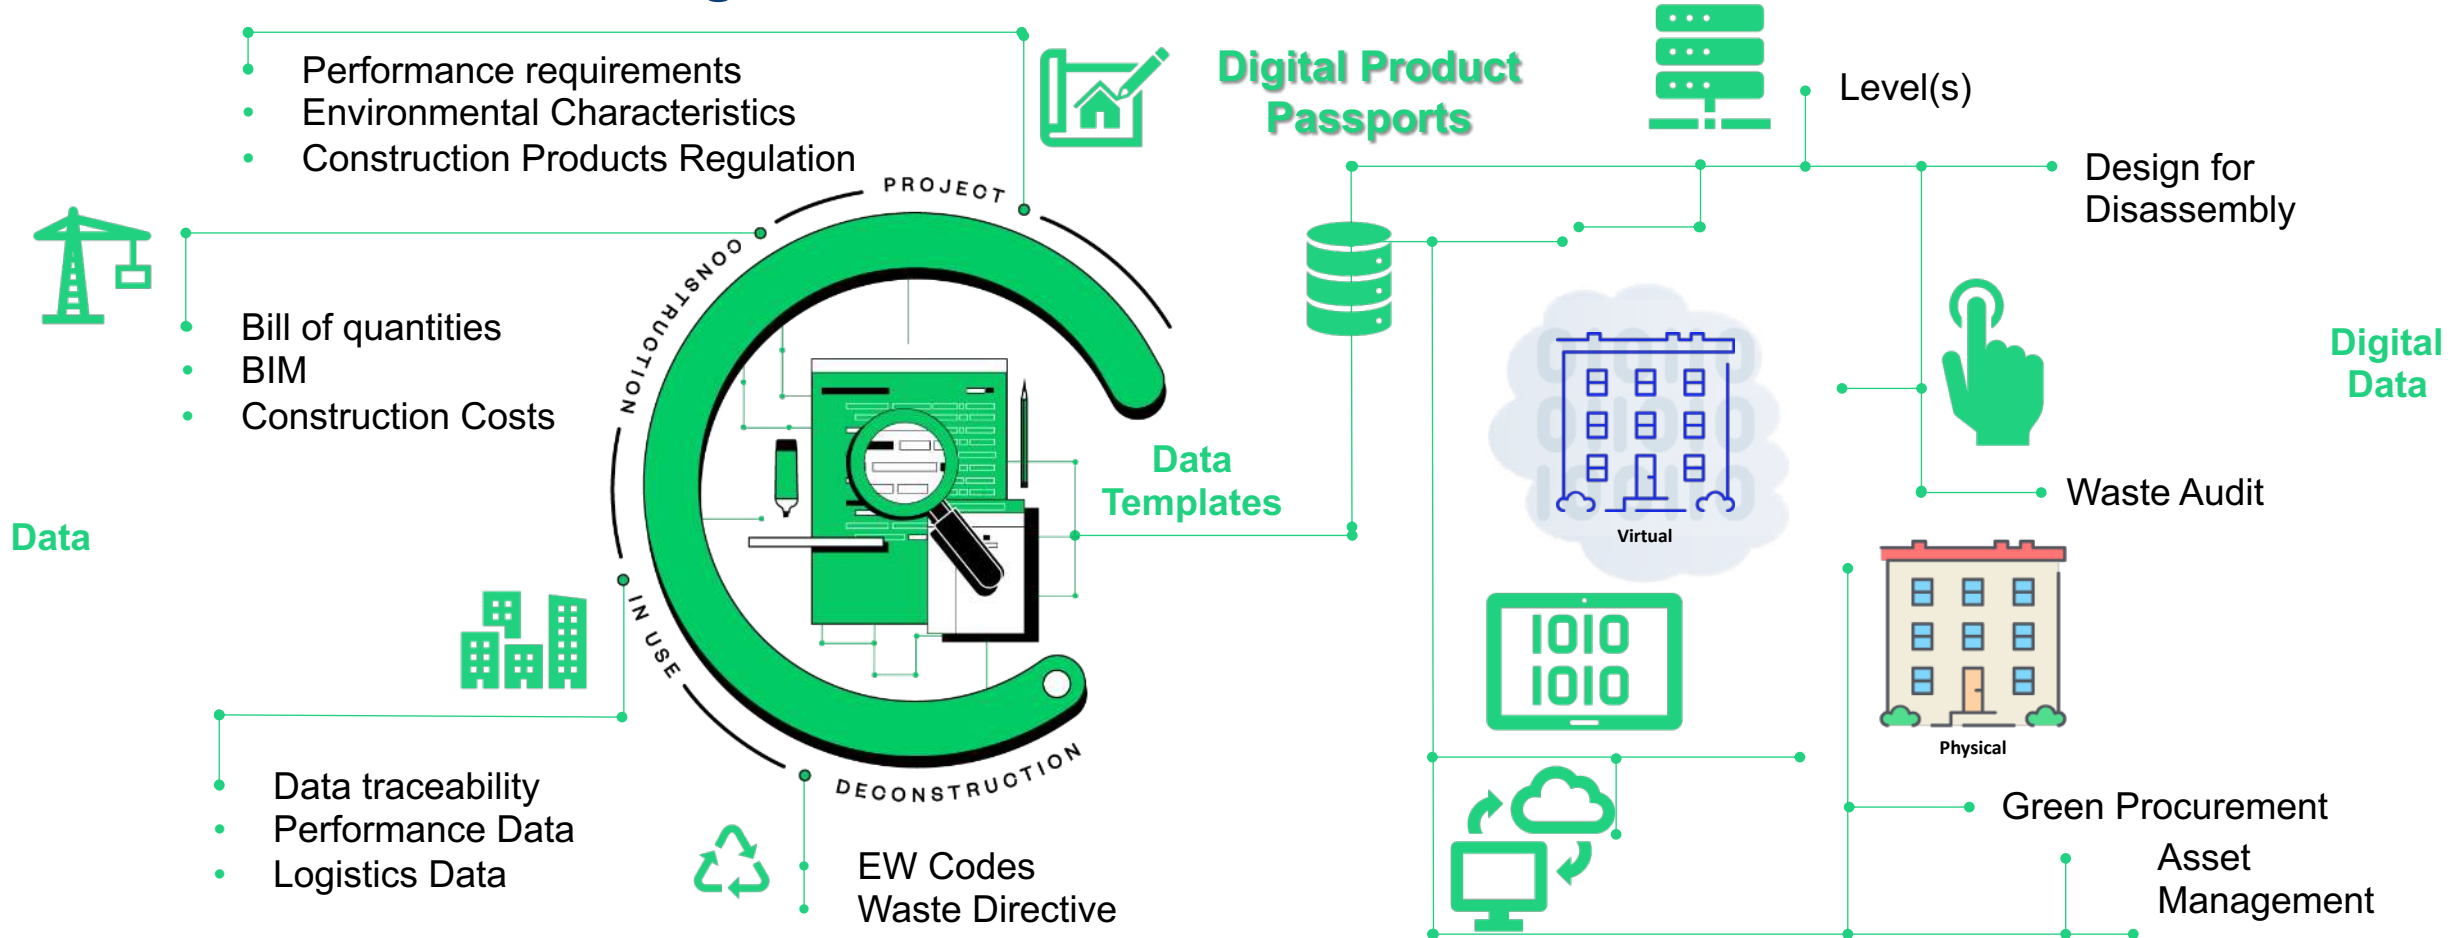

Achievements/Challenges

- **Need:** Clarification on the concepts that appear every day as buzz words in the Construction Industry.
- **Solution:** Develop conceptual frameworks evidencing the alignment and overlap of concepts in data and in processes.
- **Objective:** Provide awareness on how digitalization and circular economy share actions and work together for the benefit of the industry.
- **Goal:** Prove the added value of Data Templates as key elements of a Data continuity strategy with outcomes for Circular Economy
- **Implementation:** Set a roadmap of actions that will work as EU Green Deal Goals enablers.

Platforms for EeB Renovation BIM-Speed project pitch

Timo Hartmann
timo.hartmann@tu-berlin.de

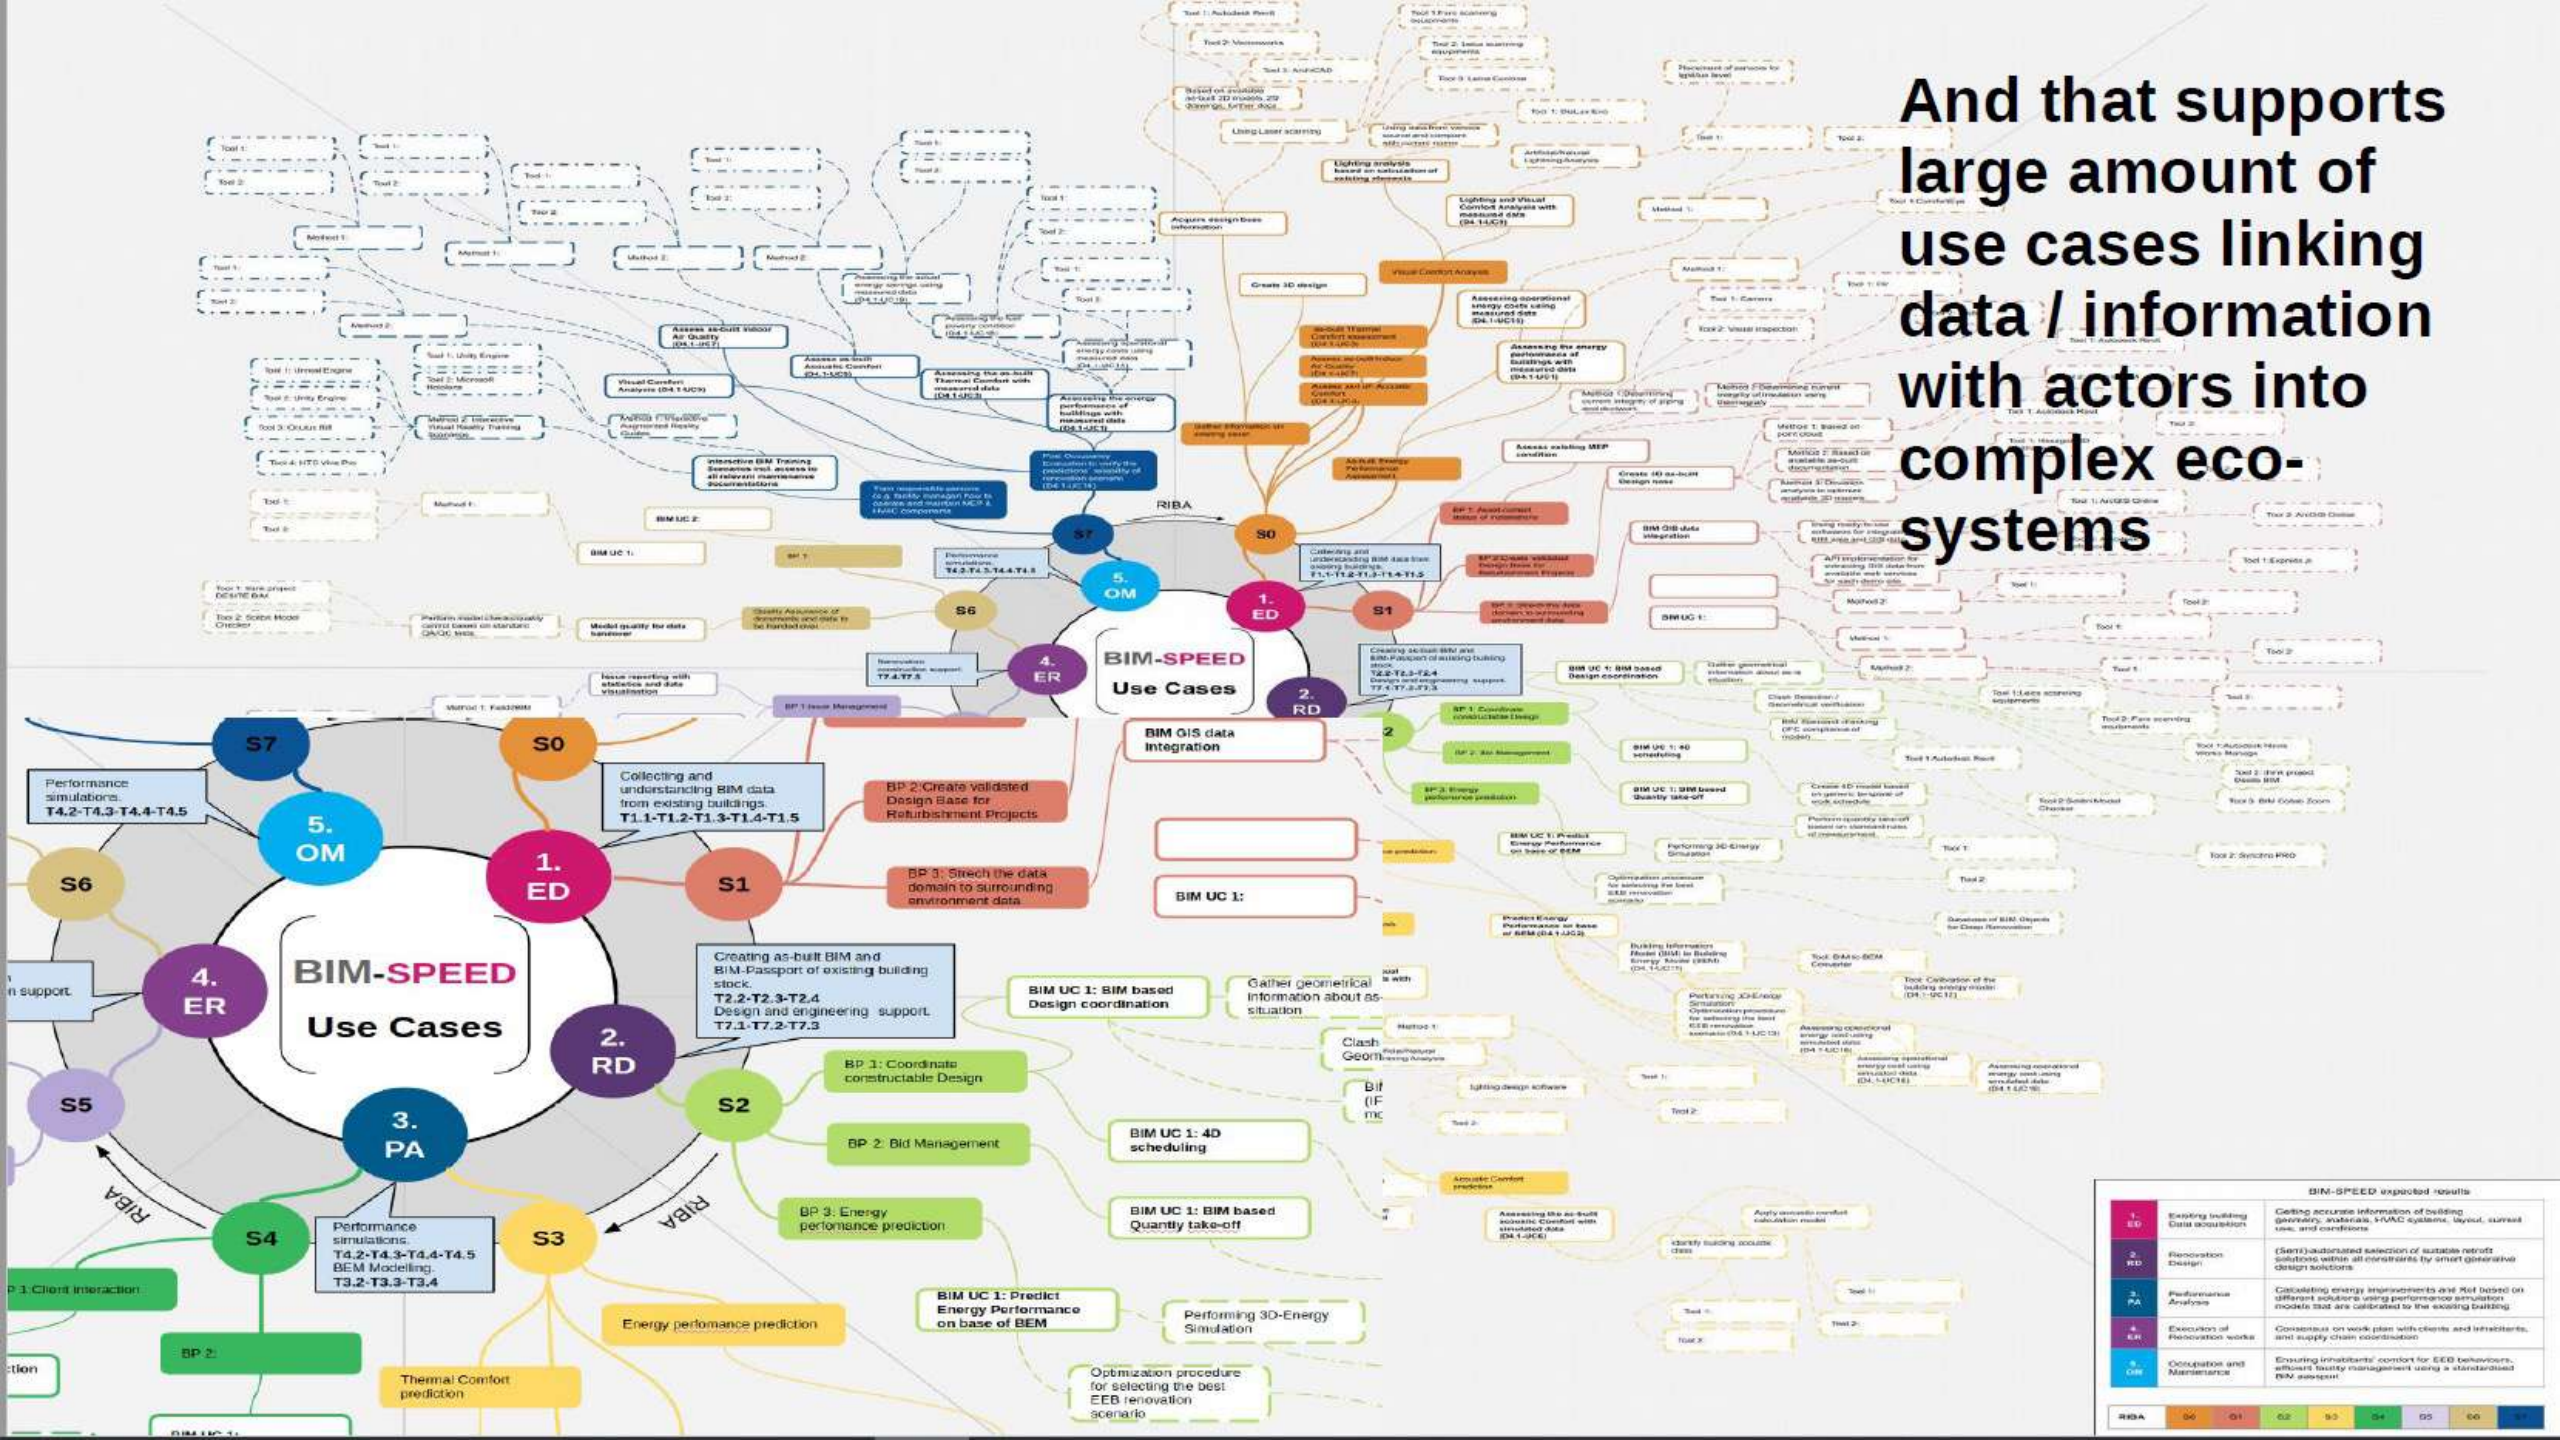

Why is it so hard to scale deep renovation efforts?

Need a platform to support complex local business networks

And that supports large amount of use cases linking data / information with actors into complex eco-systems

BIM-SPEED expected results		
1. ED	Existing building Data acquisition	Getting accurate information of building geometry, systems, HVAC systems, layout, current use, and conditions
2. RD	Renovation Design	(Semi)-automated selection of suitable retrofit solutions within all constraints by smart generative design solutions
3. PA	Performance Analysis	Calculating energy improvements and Net based on different solutions using performance simulation models that are calibrated to the existing building
4. ER	Execution of Renovation works	Coordination on work plan with clients and subcontractors, and supply chain coordination
5. OM	Occupation and Maintenance	Ensuring inhabitants' comfort for EED behaviours, efficient facility management using a standardised BIM passport

BIM- SPEED will provide all stakeholders in the housing renovation market with holistic solutions:

1. An affordable cloud-base BIM platform

2. A set of inter-operable BIM tools

3. Validation and standardised procedures for implementing renovation solutions with guaranteed energy performance and inhabitants' comfort

How can we establish the eco-system that is required around the platform:

12 demonstration projects (building renovation)
10+ illustrative apps and services integrated in the platform

Formalization of 20+ BIM-Speed use cases for BIM for renovation
<https://ucm.buildingsmart.org/>

Detailed training material

<https://www.bim-speed.eu/en/training-materials>

BIM-Speed competition

<https://www.bim-speed.eu/en/competition>

But this will not be enough ...

What is the required scope – renovation, all projects, infra?

What are business drivers, requirements and needs?

What does it take to establish a European cloud platform and eco-system for building renovation?

Who will provide, manage, maintain, market, finance it?

Do we need an EU solution or are we Okay with international offers?
