Citizen and Consumer Engagement

Energy Communities

Energy Communities Track

15th June, 2023 - Madrid, Spain

Strategies and tOOls for Incentivization and management of flexibility in Energy Communities with distributed Resources

Sustainable Places 2023

WORKSHOP – "Energy Communities Track Part 2: Citizen and Consumer Engagement" (14-17:30)

June 15th, 2023 (Madrid-Spain)

Joaquim Meléndez Roberto Petite Universitat de Girona

Data sheet

Title	RESCHOOOL- Strategies and tOOls for Incentivization and management of flexibility in Energy Communities with distributed Resources
Call: Destination: Topic:	HORIZON-CL5-2022-D3-01 Sustainable, secure and competitive energy supply HORIZON-CL5-2022-D3-01-08 Supporting the action of consumers in the energy market and guide them to act as prosumers, communities and other active forms of active participation in the energy activities
Type of action	Horizon IA
Responsible Unit	CINEA
Project Officer	Ioannis Retsolulis
Reference	101096490
Duration	42M (01/01/2023 – 30/06/2026)
Partners	16 (3 Uni / 5 SME / 2 PE / 2 RTD / 2 NP / 1 CC / 1 LARGE)
Countries	7 :: ES(4), NL(3), SE(3), GR(2), NO(1), BE(1), DE(1)
Pilots	4 (ES, NL, SE,GR)
Efforts	673PM
Total costs	6,118,594.00 €
Grant amount	5,593,570.00 € (91.42 % total costs)

3 funded projects

Objectives

"to catalyse the creation, growth and management of energy communities by leveraging the engagement of participants, facilitating the cooperation in collaborative initiatives within communities, and coproducing tools for the efficient management of energy and trading at individual and aggregated levels.

RESCHOOL aims to increase the active participation of communities in energy markets (broadly understood), enhancing and facilitating the management and trading of flexibility in cooperation with sectoral players, like DSOs and aggregators"

Tech

OBJ ₃	Interoperable architecture supported by a data model for
	the management of energy communities with aggregated
	interaction with flexibility markets

To develop a suite of services to support energy management and trading in energy communities, ready for integration and interoperation with third party solutions.

(T) To provide an **open collaborative solution** with access to individual and **aggregated energy data** and capabilities to **interact with legacy systems** and **third party solutions** in a secure and safe way.

technical (T), operational (OP), socio-economic (S)

Objectives

"to catalyse the creation, growth and management of energy communities by leveraging the engagement of participants, facilitating the cooperation in collaborative initiatives within communities, and coproducing tools for the efficient management of energy and trading at individual and aggregated levels.

RESCHOOL aims to increase the active participation of communities in energy markets (broadly understood), enhancing and facilitating the management and trading of flexibility in cooperation with sectoral players, like DSOs and aggregators"

Engagement

(S) To define, implement and validate a set of intergenerational training, transfers and engagement programmes for the dynamisation (creation, awareness, participation, management) of local energy communities.

OBJ 2 (S,T) To increase the individual **awareness and**responsiveness of energy uses at household and community level **through gamification** strategies

technical (T), operational (OP), socio-economic (S)

Objectives

"to catalyse the creation, growth and management of energy communities by leveraging the engagement of participants, facilitating the cooperation in collaborative initiatives within communities, and coproducing tools for the efficient management of energy and trading at individual and aggregated levels.

RESCHOOL aims to increase the active participation of communities in energy markets (broadly understood), enhancing and facilitating the management and trading of flexibility in cooperation with sectoral players, like DSOs and aggregators"

Validation

OBJ 5 (S,T,Op)	To validate a complete solution for the management of energy communities ready to operate with both, flexibility markets and behind the meter (legacy) systems.
OBJ 5.1 (S,Op) OBJ 5.2 (S)	To elaborate a blueprint for the creation, development and sustainable management of energy communities including flexibility services .
	To elaborate the guidelines and recommendations for the further replicability and exploitation of the developed tools and citizen engagement strategies.

technical (T), operational (OP), socio-economic (S)

RESCHOOL concept (I): general view

RESCHOOL aims to develop tools that enhance and facilitate the collective participation (energy communities) of citizens in the energy system and the relationship with other stakeholders like DSOs, aggregators, or other energy communities.

SOCIAL TOOLS

 Aiming for 800 prosumers and 20.000 citizens in 4 countries.

 Strategies for community engagement and growing.

· Intergenerational learning and training 1

 Gamification tools will be used to optimize the energy production/consumption of prosumers.

· Collaborative Community Platform.

 Data acquisition to understand users OBJ 2 energy behaviour.

ENERGY COMMUNITIES

· Prosumers are at the center of the project.

RESCHOOL will work with national/regional legislations and specific regulations.

PILOTS

SPAIN: Girona

THE NETHERLANDS: Amsterdam

SWEDEN: Stockholm

GREECE: Athens

V & REPLICATION

 Demonstrate existing and potential economic benefits within the pilot communities.

• Enable the market uptake of activities conducted, countries' framework analysis.

 Replication of the activities in nearby districts/municipalities and at national scale.

D&C ACTIONS

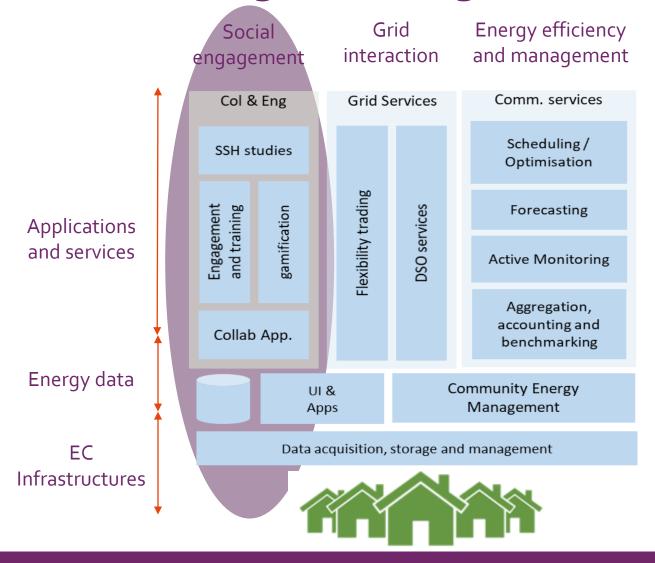

- · Raising awareness and informing about the role of prosumers in energy communities.
- · Increasing trust and acceptance of innovative energy tools and technologies.

Overall Concept (II): Proposed solution for energy communities. Growing and management

Validation: 4 pilots

PILOT 1: LOCAL ENERGY COMMUNITIES LED BY MUNICIPALITY (Diputació de Girona – 4 municipalities)

PILOT 2: AMSTERDAM EASTERN DOCKLANDS

ENERGY-FLEX
COMMUNITY, THE
FLEX-CITY PILOT
(Amsterdamneighbourhood)

PILOT 3:
HAMMARBY
SJÖSTAD 2.0,
MICROGRID
PROJECT
(Stockholm neighbourhood)

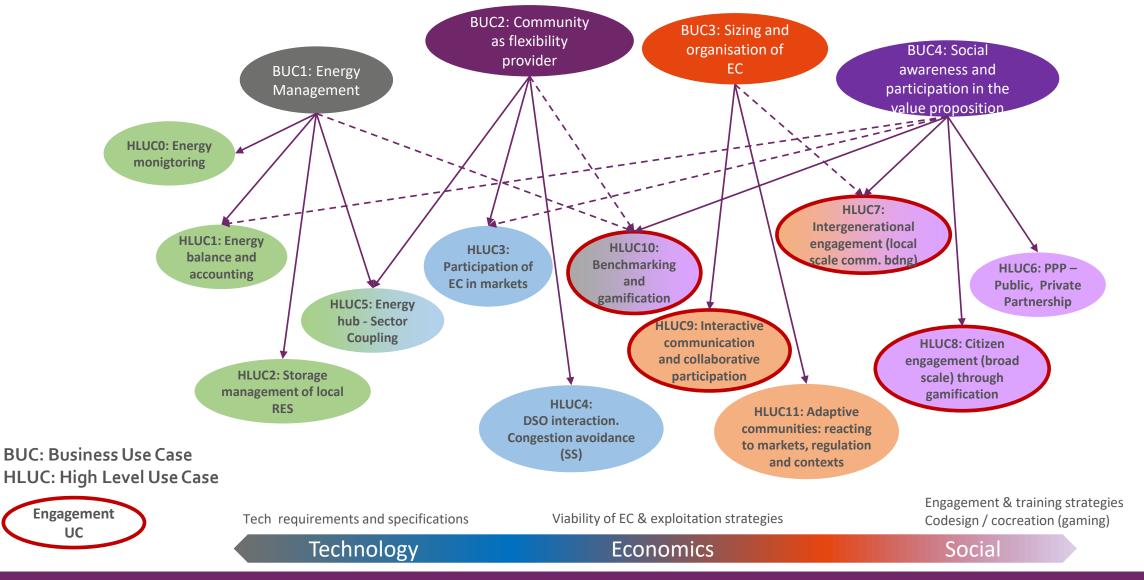

PILOT 4: COLLECTIVE ENERGY COOPERATIVE (Athens/Rafina – 2 cooperatives)

Implementation: use cases

High Level Use cases (HLUC): Tech

UC	Title	Objective	BUC	Pilot
HLUC1	Energy balance and accounting for communities	Facilitate energy sharing at intra community level.	BUC ₁	ALL
HLUC ₂	Storage management for optimal consumption of locally generated RES.	of energy.		GR, SE, (ES)
HLUC ₃	Automated participation of energy communities in energy markets	Identify and design flexibility products at community level to be offered to third parties through either implicit or explicit demand response mechanisms.	BUC ₂	NL, SE, ES
HLUC4	DSO interaction: Avoidance of congestions at secondary substations	Collaboration of energy communities with DSO aims to improve the operational safety of distribution grids at the secondary substation level.	BUC ₂	NL, ES
HLUC ₅	Energy hubs and sector coupling	Design specific services for optimal management of multi-vector energy assets in the community under different criteria.	BUC ₁ BUC ₂	SE

High Level Use cases (HLUC): policies and regulation

HLUC6	Public-Private collaboration	Identify and implement collaborative schemas with	BUC ₄	ES, NL
		participation of administrations aiming to increase		
		citizen empowerment.		

HLUC11	Adaptive communities:
	reacting to evolution of
	markets, regulations and
	contexts.

Include the need for continuous change and adaptation as a design requirement from the beginning and assess it.

BUC₃ ALL

High Level Use cases (HLUC): Social engagement

HLUC ₇	Intergenerational engagement for community building at local scale.	Study and assess importance of intergenerational relationships in accelerating the development of energy communities. Special emphasis is put on the importance of schools / education as clustering and communication driver.	BUC ₃ BUC ₄	ALL
HLUC8	Citizen engagement for community building at broad scale through gamification and rewarding.	Increase awareness on the efficient use of energy and benefits of collaborative schemas by generating incentives through gamification of exemplars and access to real data from running communities.	BUC ₄	ALL
HLUC9	Interactive communication and collaborative participation oriented to foster joint initiatives and investments.	Design and implementation of a collaborative platform to facilitate interaction among participants in the community, access to both individual and community energy data and facilitate the decisions about investments at individual or community level in RES or demand response assets.	BUC ₃	ALL
HLUC10	Benchmarking and gamification with the inclusion of rewards/ incentives.	Increase individual awareness and cooperation to reach community goals through benchmarking and gamification. Different energy-related external signals will be modified as incentives to assess the reaction and adaption of participants to the system.	BUC ₁ , BUC ₂ , BUC ₄	ALL

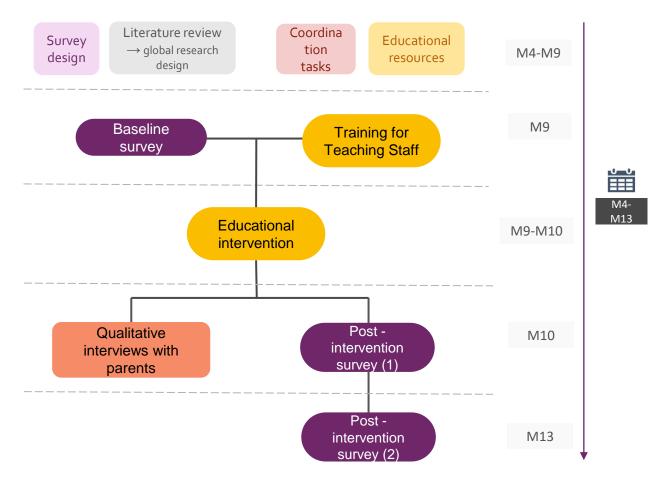

HLUC7: Intergenerational engagement for community building at local scale.

Intergenerational program to leverage social contagion effects and learning processes between older and younger generations through schools to influence individuals' energy behaviour and participation in energy communities.

Target group: schools in the neighbourhood and inlfuence área of the energy community

HLUC7: Intergenerational engagement for community building at local scale.

Methods and requirements:

- Schools from all the pilots are expected to participate, although each pilot may participate with varying levels of intensity depending on how many schools are able to incorporate the program.
- The actors involved in this Use Case are predominantly social actors. Schools and Family Schools Association are key to reach the maximum number of families

Expected impacts and outcomes:

- Quantitative data will be used to measure the impacts of the intergenerational program.
- Qualitative data will provide a comprehensive perspective on the dynamics and processes involved in intergenerational learning.
- Educational resources will be created and disseminated to schools to promote community engagement in energy communities.

HLUC8: Citizen engagement for community building at broad scale through gamification and rewarding.

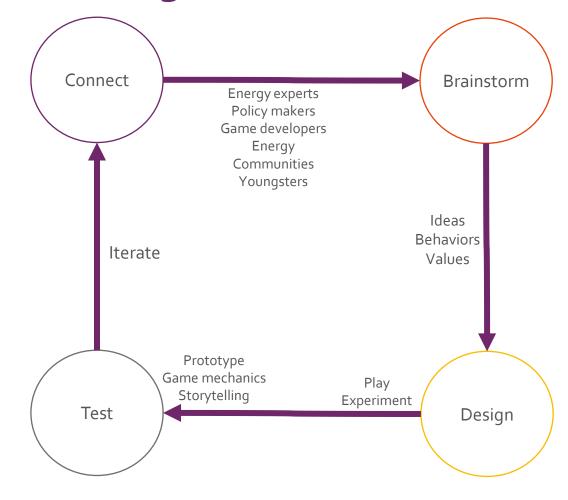

The co-creation of a serious game designed for individuals aged 10 and above can lead to increased awareness and motivation regarding the establishment or involvement in energy communities.

Target group:

- Co-creation process: with energy community members and stakeholders.
- Players: broad scale

Co-creation at two levels:

- The game will be created through a series of co-creation workshops a diverse range of stakeholders (game designers, policy experts, energy professionals, etc.)
- Pilot Participants: members of the 4 RESCHOOL pilots and students 10-12 years old living in the pilot areas.

HLUC8: Citizen engagement for community building at broad scale through gamification and rewarding.

Expected impact:

- Citizens co-creating, or playing ,the game will be able to:
 - recognize and compare household energy behaviors
 - outline the production and storage options for energy communities
 - identify the energy system structure, market, policies and stakeholders
 - discuss and plan actions for the creation and everyday function of an energy community
 - explain the individual and collective benefits of the participation in an energy community
- The impact of the game on players will be measured qualitatively throughout the co-creation workshops as well as after the completion of the game through surveys, semi-structured interviews and questionnaires (local scale: community)
- The impact of the game will also be measured quantitatively at broad scale by the number of participants, players, downloads of the created game (broad scale)

HLUC9: Interactive communication and collaborative participation oriented to foster joint initiatives and investments.

Oden Life is a simple but powerful tool that helps to inspire, educate and motivate housing associations to understand their energy use, identify efficiency measures and collaborate with neighbouring properties for a more balanced electricity grid.

Interactive tool designed to engage under three basic principles:

- **1.** Come for your simulated energy savings
- 2. Stay for your benefits from the community
- 3. Engage more over time through monthly energy nudges

Target group: Energy community (focus on building associations, SE pilot)

HLUC9: Interactive communication and collaborative participation oriented to foster joint initiatives and investments.

Implementation:

- ol Identified our **key actors** and their tasks We mapped the key tasks of the **key players**
- "jobs pains gains":
 We identified their responsibilities, concerns, as well as their goals and ambitions
- Solution exploration
 We brainstormed potential features that could help them with their tasks, remove pain, and help them achieve their desires
- Concept development

 Based on this, we have sketched out an early concept that we now need to validate and break down into 1-3 parts that can then be tested

Individual info

Community info

HLUC9: Interactive communication and collaborative participation oriented to foster joint initiatives and investments.

Expected impact:

- 20 % energy savings
- 50 % of buildings engaged
- 1-3 joint Energy Community procurements per year

HLUC10: Benchmarking and gamification with the inclusion of rewards/ incentives.

Serious game involving energy data acquired from smart meters. Achievement of mission will impact on energy bill.

Co-design with community members of an **energy conservation game** can foster **engagement** and **community building** by **actively involving end users**

Sense of ownership and responsibility towards energy saving practices, and ultimately promoting a communal culture of sustainability.

Requirements

Planning

Implementation

Initial Planning

Evaluation

Testing

Target group: Energy community

HLUC10: Benchmarking and gamification with the inclusion of rewards/ incentives.

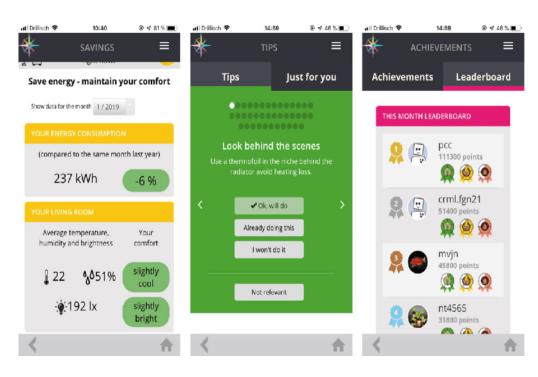

Implementation:

- Serious game to motivate behavior change towards energy conservation, and foster a sense of camaraderie and healthy competition around sustainable practices inside the community
- App with elements like leaderboards, rewards, and challenges based on real energy consumption data.

Expected impact:

- Increased Engagement: Game elements such as rewards and leaderboards motivate interaction with smart meters, fostering conscious energy usage.
- Education Through Entertainment: Funny learning about energy management. Better understanding and retaining and adoption of sustainable habits.
- **Behavior Change and Positive Habits**: Visible impact through energy data (smart meter). Continuous improvement

Koroleva, K., Melenhorst, M., Novak, J., Herrera Gonzalez, S. L., Fraternali, P., & Rizzoli, A. E. (2019). Designing an integrated socio-technical behaviour change system for energy saving. *Energy Informatics*, 2(S1). https://doi.org/10.1186/s42162-019-0088-9

RESCHOOL's support to implement EU policies

Clean Energy Package (CEP) – Renewable Energy Directive & Internal Electricity Market Directive:

- Expansion and upscaling in urban areas, where energy community potential is mostly untapped
- New revenue streams & business models, offering services to the grid, energy efficiency, energy management, making ECs become acting on EU energy markets.
- Policy advice on transposing EU rules into national laws in Greece, Spain, Sweden & the Netherlands

Green Deal and REPowerEU

- Contribution to increased EU climate and energy ambition, in response to climate emergency, Europe's energy & cost-of-living crisis and the need to rapidly phase-out (Russian) fossil fuel imports
- RESCHOOL helps achieving the new targets on RES (42,5% by 2030) and energy efficiency (11,7% less final consumption by 2030, compared to 2020)

EU Energy Market Design Reform

RESCHOOL supports the implementation of stronger EU (currently being negotiated among EU institutions) on energy sharing, facilitated & increasing system flexibility through solutions that involve storage, demand response and aggregation

RESCHOOL's Impact through Exploitation of Key Results

Wide range of environmental, economic, social and systemic benefits to society

- Climate change mitigation, trough decarbonisation, decentralisation and digitalisation
- **Empowering consumers** to take ownership of the energy transition
- Stronger democratic processes, social cohesion and transparent governance models
- Reduce energy costs & alleviate risks of social unrest and poverty, less economic pressure on businesses and industry
- More resilience in cities like **Athens, Girona and surroundings, Stockholm and Amsterdam** incl. through shorter supply & value chains, and improved labour markets and the advancement of skills among citizens and workforces
- Trust and acceptance **for local renewable energy projects** through inclusion and collective ownership (e.g. for addressing environmental concerns)
- Improve energy autonomy and energy security, incl. through independence from fossil imports, and on the other hand provide requisite flexibility for balancing local supply and demand.
- Increased system flexibility & smart solutions that can reduce infrastructure costs, e.g. by avoiding investments in conventional electricity network extension.

RESCHOOL's Impact through Exploitation of Key Results

Guidelines, best practices and social indicators

- Policy advice to improve EU and national regulatory framework for energy communities
- Driving forces for increased participation in creation of energy communities
- Transfer and replication of project results and good practices to other cities and neighbourhoods
- Intergenerational educational and training tools
- Insights from using new value measures, such as SROI – Social Return on Investment
- Guidance through standardisation roadmaps for energy communities

Technological results

- Data driven energy services, modules & toolbox that allow benefitting from monitoring, forecasting and flexibility scheduling capabilities
- RESCHOOL Collaborative Community Platform
- 100% Open Source Energy Management System
- New gamifications methods and tools for engagement and empowerment of energy community members
- AI-powered gamification framework
- Visualisaiton toolbox foe enhanced user interaction and visual presentation of energy data and performance indicators

Project Impact: Target Groups

Conclusions

- Early stage of the project (M6)
- Technical Use Cases focus on the exploitation of both individual (to increase community self-sufficiency) and aggregated flexibility (market participation).
- SSH use cases focus on engagement at four levels:
 - Intergenerational transfer (school training and assessment at different levels)
 - Increase of individual awareness (serious game involving real challenges)
 - Community engagement (collaborative and participative approaches)
 - Broad scale (game)
- Co creation and co- design process are being carried out with stakeholders and involving pilots with an enthusiastic participation
- Support to implement EU policies and expected impact in 16 target groups.

Thank you!
