

## Participation of eu.bac in Sustainable Places 2025

The **European Building Automation and Controls Association (eu.bac)** unites Europe's leading manufacturers of building automation, controls, and energy management technologies. The association promotes solutions that make buildings smarter, healthier, and more efficient - driving Europe's decarbonisation, electrification, and digitalisation goals.

Eu.bac's vision is simple yet ambitious: a future where everyone lives and works in buildings that are smart, decarbonised, and efficient. By promoting interoperability, high-performance standards, and proven, readily available technologies, eu.bac empowers building occupants, owners, and industry alike. The association also works hand in hand with policymakers and standardisation bodies to ensure industrial standards accelerate the green and digital transition across Europe's built environment.

**Why Sustainable Places 2025?** Because **it is where research, industry, and policy meet**. For eu.bac, it's the perfect forum to showcase how smart, interoperable technologies can transform Europe's buildings. As long-standing advocates of the Smart Readiness Indicator (SRI), eu.bac sees this event as a great opportunity to exchange knowledge, inspire innovation, and push forward the decarbonisation and digitalisation of Europe's building stock.

eu.bac is not only attending but actively shaping the discussion through:

- **Smart Readiness Indicator (SRI) Market Uptake Session**

*Thursday 9 October (09:00–13:00)*

eu.bac is proud to sponsor and contribute to this session. As part of this track, we are organising a **1-hour panel discussion (12:00–13:00)**. Moderated by the SRI Platform Working Group 3 Chair, Bonnie Brook, the panel will gather technology providers, building systems consultants, property owners and policy makers to discuss the SRI's current role, future potential, stakeholder impacts, and conditions for successful uptake.

- **Multi-project session: Data and tools for the decarbonisation of European building stock**

*Friday 10 October (09:00–10:30)*

eu.bac will also be represented through the openBEP4EU LIFE project joining other initiatives working on tools and approaches to drive building decarbonisation.

Through these contributions, eu.bac reinforces its commitment to advance smart, interoperable, and future-proof solutions that drive Europe's green and digital transition.
