

EDERA at Sustainable Places 2025: Building Synergies for a Net-Zero Future

EDERA, acronym for *enabling deep regeneration*, is the non-profit innovation hub that coordinates in Italy the Energiesprong program, the “energy leap” model born in the Netherlands and now spreading across Europe as one of the most advanced solutions for deep building retrofits.

EDERA's mission is clear: to accelerate urban decarbonization by transforming the way we build and renovate through new offsite-based processes and models. It is not only about reducing CO₂ emissions, but also about creating a real impact on people's quality of life, fostering social inclusion, comfort, and efficiency in living spaces.

Edera at Sustainable Places

EDERA supports Sustainable Places 2025 as a sponsor and takes part with a scientific contribution that reflects its vision: building synergies to innovate the construction sector and enable an energy transition at scale.

It will be present at Sustainable Places 2025 on Wednesday, October 8, with two appointments at the Auditorium: at 10:30 for the panel “*Construction innovation clusters open day & brokerage event*”, and at 13:30 at the Opening Ceremony, with the participation of EDERA's CEO and co-founder, Thomas Miorin.
