

Metabuilding ASBL: Driving Innovation in the Built Environment

Metabuilding ASBL is the non-profit organisation managing Europe's industrial innovation ecosystem for the Built Environment. Their mission is to foster collaboration and accelerate the adoption of sustainable, resilient, and competitive technologies by lowering barriers to innovation for all stakeholders, especially SMEs. Through their digital platform, **metabuilding.com**, and the Metabuilding Labs Open Innovation Test Bed (OITB), they connect innovators with the testing facilities, partners, and services needed to bring groundbreaking solutions from the lab to the market.

Sustainable Places is the premier European meeting point for research, innovation, and the market in our sector. For Metabuilding ASBL, sponsoring SP25 is a natural fit, as their core mission is to build and nurture this exact community. They engage with researchers, innovators, and industry leaders who are collectively driving the green transition and to support their journey from concept to market-ready solution, making this the ideal venue to engage with our ecosystem.

Join Metabuilding ASBL on October 8th for the Thematic Track, "Construction Innovation Clusters Open Day & Brokerage Event" where they will explore their ecosystem of services and the opportunities it creates. SP25 attendees will also get an exclusive preview of their new Affiliate Membership tier, launching in just a few weeks—a highly accessible gateway to their network, designed to empower every stakeholder in the built environment value chain. Be among the first to hear about this exciting development.

Explore their ecosystem at www.metabuilding.com and follow them on [LinkedIn](#), [X](#), and [Facebook](#). Be the first to join: register for their exclusive avant-première membership list at <https://forms.gle/GyGNiW2WyJmrhJHZ9>.
